**Active Particles, Volume 1** Nicola Bellomo,Pierre Degond,Eitan Tadmor,2017-04-06 This volume collects ten surveys on the modeling simulation and applications of active particles using methods ranging from mathematical kinetic theory to nonequilibrium statistical mechanics The contributing authors are leading experts working in this challenging field and each of their chapters provides a review of the most recent results in their areas and looks ahead to future research directions The approaches to studying active matter are presented here from many different perspectives such as individual based models evolutionary games Brownian motion and continuum theories as well as various combinations of these Applications covered include biological network formation and network theory opinion formation and social systems control theory of sparse systems theory and applications of mean field games population learning dynamics of flocking systems vehicular traffic flow and stochastic particles and mean field approximation Mathematicians and other members of the scientific community interested in active matter and its many applications will find this volume to be a timely authoritative and valuable resource

Subject Guide to Books in Print ,2001 **Modeling and Control of a Large Nuclear Reactor** S R Shimjith,A P Tiwari,B Bandyopadhyay,2012-08-10 Control analysis and design of large nuclear reactors requires a suitable mathematical model representing the steady state and dynamic behavior of the reactor with reasonable accuracy This task is however quite challenging because of several complex dynamic phenomena existing in a reactor Quite often the models developed would be of prohibitively large order non linear and of complex structure not readily amenable for control studies Moreover the existence of simultaneously occurring dynamic variations at different speeds makes the mathematical model susceptible to numerical ill conditioning inhibiting direct application of standard control techniques This monograph introduces a technique for mathematical modeling of large nuclear reactors in the framework of multi point kinetics to obtain a comparatively smaller order model in standard state space form thus overcoming these difficulties It further brings in innovative methods for controller design for systems exhibiting multi time scale property with emphasis on three time scale systems

Geometric Structures of Information Frank Nielsen,2018-11-19 This book focuses on information geometry manifolds of structured data information and their advanced applications featuring new and fruitful interactions between several branches of science information science mathematics and physics It addresses interrelations between different mathematical domains like shape spaces probability optimization algorithms on manifolds relational and discrete metric spaces

computational and Hessian information geometry algebraic infinite dimensional Banach information manifolds divergence geometry tensor valued morphology optimal transport theory manifold topology learning and applications like geometries of audio processing inverse problems and signal processing The book collects the most important contributions to the conference GSI 2017 Geometric Science of Information [Linear Discrete-Time Systems](#) Zoran M. Buchevats, Lyubomir T. Gruyitch, 2017-11-22 This book covers crucial lacunae of the linear discrete time time invariant dynamical systems and introduces the reader to their treatment while functioning under real natural conditions in forced regimes with arbitrary initial conditions It provides novel theoretical tools necessary for the analysis and design of the systems operating in stated conditions The text completely covers two well known systems IO and ISO along with a new system IIO It discovers the concept of the full transfer function matrix  $F(z)$  in the  $z$  complex domain which incorporates the  $Z$  transform of the system input and another variable vectors all with arbitrary initial conditions Consequently it addresses the full system matrix  $P(z)$  and the full block diagram technique based on the use of  $F(z)$  which incorporates the  $Z$  transform of the system input and another variable vectors all with arbitrary initial conditions The book explores the direct relationship between the system full transfer function matrix  $F(z)$  and the Lyapunov stability concept definitions and conditions as well as with the BI stability concept definitions and conditions The goal of the book is to unify the study and applications of all three classes of the linear discrete time time invariant system for short systems [Sliding Mode Control of Semi-Markovian Jump Systems](#) Baoping Jiang, Hamid Reza Karimi, 2021-08-23 This book presents analysis and design for a class of stochastic systems with semi Markovian jump parameters It explores systematic analysis of semi Markovian jump systems via sliding mode control strategy which makes up the shortages in the analysis and design of stochastic systems This text provides a novel estimation method to deal with the stochastic stability of semi Markovian jump systems along with design of novel integral sliding surface Finally Takagi Sugeno fuzzy model approach is brought to deal with system nonlinearities and fuzzy sliding mode control laws are provided to ensure the stabilization purpose Features Presents systematic work on sliding mode control SMC of semi Markovian jump systems Explores SMC methods such as fuzzy SMC adaptive SMC with the presence of generally uncertain transition rates Provides novel method in dealing with stochastic systems with unknown switching information Proposes more general theories for semi Markovian jump systems with generally uncertain transition rates Discusses practical examples to verify the effectiveness of SMC theory in semi Markovian jump systems This book aims at graduate and postgraduate students and for researchers in all engineering disciplines including mechanical engineering electrical engineering and applied mathematics control engineering signal processing process control control theory and robotics
