Technological Change & Labour Relations Muneto Ozaki, 1992 A study which looks at the reciprocal influence of technological change and labour relations and includes case studies from six industrialized market economy countries as well as a comparative chapter The book focuses on the introduction of microelectronic technology in machinery manufacturing banking and printing to examine how workers participated in the changeover and how labour relations in the enterprises studied were affected by the new technology **Technological Change, Rationalisation and Industrial Relations** Otto

Jacobi, Bob Jessop, Hans Kastendiek, Marino Regini, 2017-07-06 Originally published in 1986 the first part of this book outlines some of the general problems of technological change and labour relations It discusses the politics of rationalisation and of industrialisation in the car industry by examining case studies of Volkswagen British Leyland and FIAT The impact

developments exert on trade unions in the UK Germany and Italy is discussed simultaneously *Technological Change and Its Labor Impact in Four Industries*, 1988 *Trade Unions and Technological Change* Steven Anderman, 2018-03-22 When

this book was first published in 1967 it was one of the first pieces of research to systematically examine the manpower problems associated with rapidly changing technology It discusses issues such as technological change and unemployment changes in the structure of employment the mobility of labour occupational structure and adjustment hours of work and labour management relations Its findings suggest that structural unemployment and redundancy are only two of a host of difficulties accompanying technical progress Although the book originated in Sweden its relevance is clear to other Western european countries and researchers and policy makers in the USA New Technologies and the Firm Peter

Swann, 2018-04-09 Originally published in 1993 this book presents the findings of 14 teams involved in a research initiative to examine the initiation and response to innovation in firms It draws together the many strands which were discovered to influence the successful generation and adoption of new technologies The core issues in technology management are looked at including skills and expertise markets and marketing finance and the issue of technology collaboration both on a domestic and international basis Technology is shown to be at the very heart of corporate strategy and policy formation **A Theory of Employment Systems** David Marsden, 1999-09-16 A Theory of Employment Systems considers why there are such great international differences in the way employment relations are organized within the firm Taking account of the growing evidence that international diversity persists despite globalization it sets out from the theory of the firm first developed by

Coase and Simon and explains why firms and workers should use the employment relationship as the basis for their economic cooperation The originality of the employment relationship lies in its flexibility It gives managers the authority to organize work but it also establishes limits on employees obligations The nature of these limits is fundamental to our understanding of the employment relationship and its international diversity The author argues that they are provided by four basic types of employment rule Which one predominates in a given environment is the source of international diversity in employment relations Drawing upon evidence from the US Japan France Germany and Britain the theory is developed to show why such diversity extends deep into key areas of human resource management such as performance management incentive pay and skill development It also explains why the open ended employment relationship continues to dominate work despite the growth of market mediated work relations

The Japanese Enterprise System W. Mark Fruin, 1992 This volume merges four streams of inquiry and interpretation in a study of the evolution and emergence of Japan's leading industrial firms during the twentieth century First it is a historical study of how the industrial institutions of modern Japan appeared and matured Second it is an organization study of the basic forms of social and economic interaction in Japan Third it is a development study of how circumstances of rapid technical and economic change have shaped the Japanese business system It is also a strategy study of how Japanese managers have responded to and shaped these circumstances This fourfold synthesis offers a model of institutional development under conditions of late economic development and private initiative that falls somewhere between a capitalist development state and a free market economy Business policy rather than industrial policy is accentuated revealing a set of robust institutions and a dynamic to activate and interrelate them
