Technology And Employment:

Technology and Employment Richard Michael Cyert, David C. Mowery, Committee on Science, Engineering, and Public Policy (U.S.). Panel on Technology and Employment, 1987 This report addresses a number of issues that have surfaced in the debates over the impact of technological change on employment These issues include the effects of technological change on levels of employment and unemployment within the economy on the displacement of workers in specific industries or sectors of the economy on skill requirements on the welfare of women minorities and labor force entrants in a technologically transformed economy and on the organization of the firm and the workplace It concludes that technological change will contribute significantly to growth in employment opportunities and wages although workers in specific occupations and industries may have to move among jobs and careers Recommends initiatives and options to assist workers in making such transitions ISBN 0 309 03744 1 pbk

Technology And Employment Eli Ginzberg, Thierry J Noyelle, Thomas M Stanback Jr, 2020-01-29 This volume is the first of four publications that will present the research on technology and employment carried out by Conservation of Human Resources of Columbia University over the past several years This research was started with a small grant from the Rockefeller Foundation in 1982

High Technology and Job Loss Russell W. Rumberger, 1984

The Jobs of Tomorrow Mark A. Dutz, Rita K. Almeida, Truman G. Packard, 2018-04-10 While adoption of new technologies is understood to enhance long term growth and average per capita incomes its impact on lower skilled workers is more complex and merits clarification Concerns abound that advanced technologies developed in high income countries would inexorably lead to job losses of lower skilled less well off workers and exacerbate inequality Conversely there are countervailing concerns that policies intended to protect jobs from technology advancement would themselves stultify progress and depress productivity This book squarely addresses both sets of concerns with new research showing that adoption of digital technologies offers a pathway to more inclusive growth by increasing adopting firms outputs with the jobs enhancing impact of technology adoption assisted by growth enhancing policies that foster sizable output expansion The research reported here demonstrates with economic theory and data from Argentina Brazil Chile Colombia and Mexico that lower skilled workers can benefit from adoption of productivity enhancing technologies biased towards skilled workers and often do The inclusive jobs outcomes arise when the effects of increased productivity and expanding output overcome the substitution of workers for technology While the substitution effect replaces some lower skilled workers with new technology and more highly skilled labor the output effect can lead to an increase in the total number of jobs for less skilled workers Critically output can increase sufficiently to increase jobs across all tasks and skill types within adopting firms including jobs for lower skilled workers as long as lower skilled task content remains complementary to new technologies and related occupations are not completely automated and replaced by machines It is this channel for inclusive growth that underlies the power of pro

competitive enabling policies and institutions such as regulations encouraging firms to compete and policies supporting the development of skills that technology augments rather than replaces to ensure that the positive impact of technology adoption on productivity and lower skilled workers is realized

Technology's Impact on Employment Opportunities for People with Disabilities Carl DeGeorge, Milton Kramer, 2012-12-20 This book examines the importance of social media and other information technologies in connecting people to job opportunities Not surprisingly digital barriers to our networked economy can reinforce rather than break down disproportionately low employment among people with disabilities Delivering on the commitment to improve the performance of America's students in science technology engineering and mathematics STEM through the Educate to Innovate program requires that all Americans including people with disabilities have the necessary digital tools to pursue careers in STEM The ongoing transition to an economy based largely on the manipulation of information has sweeping implications for job creation for people with disabilities New technologies create opportunities for people with disabilities to work alongside our non disabled colleagues However the employment rate of people with disabilities still remains disproportionately low and we have yet to see evidence of real progress in increasing employment of people with disabilities
