Techno-Fix Michael Huesemann, Joyce Huesemann, 2011-10-04 Nanotechnology Genetic engineering Miracle Drugs We are promised that new technological developments will magically save us from the dire consequences of the 300 year fossil fueled binge known as modern industrial civilization without demanding any fundamental changes in our behavior There is a pervasive belief that technological innovation will enable us to continue our current lifestyle indefinitely and will prevent social economic and environmental collapse Techno Fix shows that negative unintended consequences of technology are inherently predictable and unavoidable techno optimism is completely unjustified and modern technology in the presence of continued economic growth does not promote sustainability but hastens collapse The authors demonstrate that most technological solutions to social and technology created problems are ineffective They explore the reasons for the uncritical acceptance of new technologies show who really controls the direction of technological change and then advocate extensive reform This comprehensive expos is a powerful argument for why we can and should put the genie back in the bottle An insightful and powerful critique it is required reading for anyone who is concerned about blind techno optimism and believes that the time has come to make science and technology more socially and environmentally responsible For more information please visit technofix.org

Technology and Environment National Academy of Engineering, 1989-02-01 Technology and Environment is one of a series of publications designed to bring national attention to issues of the greatest importance in engineering and technology during the 25th year of the National Academy of Engineering A paradox of technology is that it can be both the source of environmental damage and our best hope for repairing such damage today and avoiding it in the future Technology and Environment addresses this paradox and the blind spot it creates in our understanding of environmental crises The book considers the proximate causes of environmental damage machines factories cities and so on in a larger societal context from which the will to devise and implement solutions must arise It helps explain the depth and difficulty of such issues as global warming and hazardous wastes but also demonstrates the potential of technological innovation to have a constructive impact on the planet With a range of data and examples the authors cover such topics as the industrial metabolism of production and consumption the environmental consequences of the information era and design of environmentally compatible technologies
