Perspectives in Operations Management Rakesh K. Sarin, 2012-12-06 In the fall of 1992 a conference honoring Elwood S. Buffa was held at the Anderson Graduate School of Management of the University of California Los Angeles This book is a collection of the work presented at that conference The scholars who gathered to honor El are the prominent researchers in the field of Operations Management Their collective work published in this book represents the richness of the field and provides the reader with valuable insights into its important issues and problems While any grouping of the articles by these distinguished scholars will be arbitrary I have organized the book in four sections In the first section the articles dealing with the strategic issues in Operations Management are compiled The articles deal with continuous improvement quality services supply chain management and creating value through operations The articles that explore the interface of Operations

Management with other functional areas e.g. engineering and marketing are grouped in the second section. The third section of the book contains articles that attempt to model some important planning problems that arise in the management of production and operations. Some of the papers in this section provide state of the art reviews of selected topic areas. Finally the fourth section contains articles that deal with future directions for Operations Management. The authors offer several insights into the future evolution of the field. The book begins with the keynote address given by El Buffa at the start of the conference on November 2, 1991.

The Dynamics of Technology G. Barbiroli, 2013-03-14 Technology is taking on an increasingly central and determining role in society and can provide contradictory results: wealth on the one hand but also unemployment, environmental imbalances and other social problems on the other. Manufacturing techniques and production organization are chosen in every country based mainly on the specific needs of the companies, while the real needs of each population are often quite different. Already in order to prevent all forms of technology from becoming increasingly invasive towards both the natural supply of resources and the specific though highly differentiated needs of humanity, technological paths must be identified and followed which are capable of making the various needs compatible from the standpoint of sustainable development: the conservation and increase in value of natural resources and the quality of development. This will become increasingly important in the future. This goal is undoubtedly ambitious and difficult to achieve; however, evidence of the problems caused by generalized uncontrolled use of technology all over the world leads us to believe that intense efforts must be made to achieve this aim. If not, humankind runs the risk of an irreversible degradation of the most important aspects of economic development and its quality. Within this framework, those companies that produce goods and services obviously occupy a central, active role which they must play with a view both to competitiveness and overall qualification and to contributing to the objectives of sustainable development.

Business Networking Hubert Österle, Elgar Fleisch, Rainer Alt, 2012-12-06 Electronic commerce, supply chain management, customer relationship management and other forms of Business Networking will fundamentally change the way business will be conducted in the information age. We will see close collaboration between processes of different enterprises and, above all, new enterprises and new processes. Business Networking offers exceptional opportunities for innovators and harbors fundamental risks for slowpokes. This book proposes a process-oriented model for Business Networking and the concept of networkability to develop realistic strategies for managing enterprise relationships in the Internet economy. It formulates key success factors and management guidelines which were developed in close cooperation between research and practice.

R&D Strategy & Organisation: Managing Technical Change In Dynamic Contexts Vittorio Chiesa, 2001-03-09 This book deals with key issues and trade offs in R D strategy and organisation, paying attention especially to dynamic competitive contexts where technology plays a key role. These topics are treated from the perspective of the decision maker, i.e. the manager who makes decisions in terms of R D strategy and organisation. The book addresses typical problems of large firms having structured R D and operating

businesses where R D is a source of competitive advantages Although it focuses strongly on R D it sees R D as a part a key part of the process of technological innovation and therefore as an activity to be strongly and appropriately integrated with other functions to make innovation successful This book is primarily conceived as an academic review of research topics Therefore the main audience is composed of scholars researchers and PhD students However the book can be useful for postgraduate students taking MBA electives or students attending courses on technology management It is also relevant to R D managers and more generally people responsible for units concerned with technological innovation
