Congress. House. Committee on Science and Technology (2007). Subcommittee on Energy and Environment, 2010 **Electric Power and Energy in China** Zhenya Liu, 2013-12-31 The acute energy problems facing China today are characterized by their own histories and realities Some have come about because of China's energy endowment and stage of development while others have been created by a combination of domestic and global factors Some are the results of an accumulation of longstanding contradictions while others are new challenges posed by the new order There are no miracle cures to solve these problems instantly What is needed is a tireless enquiry with goals planning and procedures guided by a clear energy strategy With China's increasing dependence on foreign energy sources and the global energy situation and greenhouse gas issue exerting an increasingly prohibiting effect on China's energy development energy diplomacy has become an important component of Chinese diplomatic affairs Based on a broad energy outlook this book studies and analyzes China's energy issues and energy strategies from the perspective of electric power Discusses a variety of issues including energy transportation and allocation end user consumption markets early warning and emergency technical innovation As a leading player in the power and energy area China's strategies attracts global attention Proposes the innovative idea of Macro Energy Perspective As a key player in China's energy industrial circle the author's perspective can help global audiences to understand China's energy strategies better **Electric Power and Energy in China** is ideal for government energy policy makers engineers scientists and enterprise managers to understand China's strategy in electric power and energy It is also a good reference for energy economics researchers consultants and university students **Reactor Technology**, 1972 **Handbook Of Renewable Energy Technology** Ahmed F Zobaa, Ramesh C Bansal, 2011-01-26 Effects of environmental economic social political and technical factors have led to the rapid deployment of various sources of renewable energy based power generation The incorporation of these generation technologies have led to the development of a broad array of new methods and tools to integrate this new form of generation into the power system network This book arranged into six sections highlights various renewable energy based generation technologies and consists a series of papers written by experts in their respective fields of specialization The **Handbook of Renewable Energy Technology** will be of great practical benefit to professionals scientists and researchers in the relevant industries and will be of interest to those of the general public wanting to know more about renewable energy technologies *China's Energy Revolution in the Context of the Global Energy Transition* Shell International

B.V.,Development Research Center DRC,2020-05-29 This open access book is an encyclopaedic analysis of the current and future energy system of the world's most populous country and second biggest economy. What happens in China impacts the planet. In the past 40 years, China has achieved one of the most remarkable economic growth rates in history. Its GDP has risen by a factor of 65, enabling 850 000 people to rise out of poverty. Growth on this scale comes with consequences. China is the world's biggest consumer of primary energy and the world's biggest emitter of CO₂ emissions. Creating a prosperous and harmonious society that delivers economic growth and a high quality of life for all will require radical change in the energy sector and a rewiring of the economy more widely. In China's Energy Revolution in the Context of the Global Energy Transition, a team of researchers from the Development Research Center of the State Council of China and Shell International examine how China can revolutionise its supply and use of energy. They examine the entire energy system: coal, oil, gas, nuclear, renewables, and new energies in production, conversion, distribution, and consumption. They compare China with case studies and lessons learned in other countries. They ask which technology, policy, and market mechanisms are required to support the change, and they explore how international cooperation can smooth the way to an energy revolution in China and across the world. And they create and compare scenarios on possible pathways to a future energy system that is low carbon, affordable, secure, and reliable.
