Committee on Interior and Insular Affairs,1972 *National Goals Symposium* United States. Congress. Senate. Interior and Insular Affairs,1972 **SCARY ROBOTS** Lawrence J. Terlizzese,2020-09-20 Technophobia causes us to reflect to stop and ask what for Why are we doing this and could there be negative consequences to our actions Technophobia is not anti technology if we are honest no one is really anti technology that would be a rejection of life itself But neither does technophobia give the green light to all things technical An altogether too common position these days is to accept technology as manna from heaven as if just the very use of it will inherently lead us in the right direction All use is good use Technophobia does not allow us such an easy conscience Environment Kenneth E. Program Aid , 1978 **Philippine Development** , 1983 Policies for Industrial Growth in a Competitive World , 1984 **Nuclear Energy** Karl O. Ott, 2012-12-06 E L Zebroski During the 1970s there was rapid growth of a philosophy that assumes that deindustrialization will result in an Elysian postindustrial society This view is generally antitechnology commonly in opposition to large scale energy sources and often supportive of high cost speculative or at most small scale energy sources The social and economic costs of policies which would lead to deindustrialization are ignored or considered to be irrelevant The development of civilian nuclear energy as a by product of wartime developments also brings with it an association with the fear of nuclear weapons and with the repugnance for war in general Many of these views and associations mingle to provide significant political constituencies These have had considerable impact on party platforms and elections Also another important aspect is the conservation viewpoint This view correctly concerns the fact that in definite increase in per capita energy consumption coupled with increasing U S and world populations must at some point be restrained by limits on resources as well as by limits arising from environmental effects All of these concerns have been subject to voluminous analysis publications and public discussion They underlie one of the dominant social movements of the 1970s and 1980s Indefinite exponential growth of energy production is neither possible nor desirable
