PRINCIPLES OF POLYMER PROCESSING

Zehef Tadmor and Costas G. Gogos

This text adopts a novel approach to polymer processing, which is viewed as the meeting ground between polymer science and engineering. Shaping steps (die forming, molding, etc.) and the elementary steps which prepare the polymer for shaping are clearly formulated here. Polymers undergo changes during processing, so a thorough understanding of their properties and responses is encouraged as essential for the sound design and operation of polymer processing machinery. This book contains over 350 illustrations. The final chapter serves as a guide on how to use the text for the analysis of common processes. An appendix contains processing properties of typical polymers measured in the laboratory. *SPE Monograph Series.*

INTRODUCTION TO POLYMER SCIENCE AND TECHNOLOGY

An SPE Textbook

Edited by Herman S. Kaufman & the late Joseph J. Falcetta

This new work provides a comprehensive background on making, characterizing, and using polymers. It outlines the fundamentals for understanding the molecular basis of chemistry and the properties and fabrication processes of polymer materials. An advanced level scientific or engineering background is not required for understanding the material covered—thus making it perfect for college students or those interested in an introduction to polymers. Also includes many chapter-end problems. *SPE Monograph Series.*

Plasticizers Derived from Post-consumer PET Ewa Langer, Krzysztof Bortel, Marta Lenartowicz-Klik, Sylwia Waskiewicz, 2019-11-02 Plasticizers Derived from Postconsumer PET Research Trends and Potential Applications presents a roadmap to the successful use of postconsumer PET to obtain plasticizers for later use a proposal which presents both economic and sustainability advantages Based on the results of the latest research into the development of chemical recycling techniques of PET waste this book describes techniques where the plasticizer obtained can be utilized for value addition in PVC and other polymers In addition the book provides basic introductory information on the role of plasticizers in the modification of polymers basic quality requirements and the latest trends in the synthesis and use of plasticizers in industry also presenting the available methods of PET recycling with particular emphasis on chemical recycling analysis of the PET market the availability of postconsumer PET and its value as a raw material for other products Based on the authors research the book discusses the use of postconsumer PET in the synthesis of monomeric and oligomeric plasticizers Synthesis conditions are shown in detail and the influence of the structure of synthesized softeners on their basic quality parameters are assessed and compared with selected commercially available products In the final sections the book covers the economic challenges and benefits of this process and its application to newly developed products *Physico-chemical Aspects of Textile Coloration* Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large

and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products. As the great majority of such products are coloured predominantly using aqueous dyeing processes, the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material. The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres. *Physico Chemical Aspects of Textile Coloration* provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye. The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing, dyeing as an area of study as well as the terminology employed in dyeing technology and science, contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level, fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption, detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres, polyester, polyamide, wool, polyacrylonitrile and silk fibres, non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium. The up to date text is supported by a large number of tables, figures and illustrations as well as footnotes and widespread use of references to published work. The book is essential reading for students, teachers, researchers and professionals involved in textile coloration.

Applied Polymer Science: 21st Century C. Craver, C. Carraher, 2000-12-19

The 75th Anniversary Celebration of the Division of Polymeric Materials Science and Engineering of the American Chemical Society in 1999 sparked this third edition of *Applied Polymer Science* with emphasis on the developments of the last few years and a serious look at the challenges and expectations of the 21st Century. This book is divided into six sections each with an Associate Editor responsible for the contents, with the group of Associate Editors acting as a board to interweave and interconnect various topics and to insure complete coverage. These areas represent both traditional areas and emerging areas but always with coverage that is timely. The areas and associated chapters represent vistas where PMSE and its members have made and are continuing to make vital contributions. The authors are leaders in their fields and have graciously donated their efforts to encourage the scientists of the next 75 years to further contribute to the well being of the society in which we all live. Synthesis, characterization and application are three of the legs that hold up a steady table. The fourth is creativity. Each of the three strong legs are present in this book with creativity present as the authors were asked to look forward in predicting areas in need of work and potential applications. The book begins with an introductory history chapter introducing readers to PMSE. The second chapter introduces the very basic science terms and concepts critical to polymer science and technology. Sections two, three and four focus on application areas emphasizing emerging trends and

applications Section five emphasizes the essential areas of characterization Section six contains chapters focusing of the synthesis of the materials
