### **Global Environmental Politics** Johannes

Urpelainen, 2022-07-29 Emerging economies have fundamentally transformed global environmental politics. Led by China and India, they increasingly make or break international negotiations which now require agreement among a large number of governments with widely varied preferences. Emerging economies which still suffer from widespread poverty and frequently struggle with policy implementation often feel that Western-led initiatives neglect their needs. What does the global environmental policy landscape look like in the age of a rising Global South? This book explains why emerging economies have come to dominate global environmental politics and examines the implications for future international cooperation. Johannes Urpelainen shows that emerging economies continue to prioritize economic growth and often have limited institutional capacity to contain the environmental destruction that it causes. However, he argues, despite barriers to cooperation, innovative bargaining and institutional design offer a way forward. Bottom-up agreements that respect national sovereignty and invest in capacity building hold more promise than traditional top-down treaties with binding commitments. The book features detailed discussions of attempts to address hazardous chemicals, loss of biodiversity, and climate change, a comparative analysis of China and India, and case studies of nine other emerging economies around the world. *Global Environmental Politics* is an essential forward-looking overview of today's most pressing international issue.

### Strategic Planning in Technology Transfer to Less Developed

Countries Christian Madu, 1992-01-27 Despite an avalanche of literature over the last 30 years, there has been relatively little written on the role played by strategic planning in the transfer of technology, particularly from developed to less developed countries. Technology transfer, which involves the acquisition of inventive activity by secondary users, is conceded vital to socio-economic growth, but usually it is looked at internationally from a micro perspective. Unlike other books, Madu's volume looks at technology transfer holistically. It examines the advantages of technology transfer and its limitations by viewing recipient nations as systems in which social, economic, behavioral, and political influences converge to help shape technological decisions. Only when a systems perspective like this is adopted and technology seen as a strategic variable can technology transfer be understood and successfully implemented, says Madu. Madu thus identifies the failures of technology transfer as the result of malfunctions in three components of the system: technology, structure, and behavior. He analyzes these malfunctions, offers ways to repair them, and considers technology from the viewpoints of both transferrer and receiver, whose missions, goals, and objectives are often not only disparate but sometimes in conflict. He then offers what he calls prescriptive frameworks and guidelines to help implement transfer and to see it as a variable that must be integrated into national development planning. Throughout, Madu makes it clear that the objective of technology transfer is the maximizing of social welfare. Using this overarching premise, he is able to evaluate both the benefits and the social costs associated with technology transfer and to develop his prescriptive integrative models. Intended for specialists in international finance and

development and international business management Madu s book will be of special value to teachers of graduate courses in socio economic development public policy and economics and to policymakers throughout government      *The Environmental Element in Space Law* Lotta Viikari,2008-06-30 While decades of space ventures have led to significant technological advances space activities have also brought increasing environmental problems This book examines the current international legal regimes in space law and environmental law in order to ascertain their applicability and efficacy in addressing environmental threats in the space sector The research suggests mechanisms which could improve environmental protection in the sector and strengthen the environmental element in space law These mechanisms include a variety of norm setting strategies used in international environmental management Special attention is drawn to the potential of environmental impact assessment in the space sector and to dispute resolution procedures Like other areas of human activities the space sector should accommodate both economic interests and environmental protection in line with the principle of sustainable development      **CAFTA-DR, European Free Trade Agreements and the Industrial Property System in Central America** Fabian Böttger,2025-06-19 This book analyses the impact of CAFTA DR and European Free Trade Agreements on the industrial property system in Central America While there is ample literature on bilateral and regional FTAs it is often limited to the contractual obligations assumed by the participating countries This book goes a step further and analyses how these obligations are implemented through national legislation institutional changes and legal practice To provide a deeper understanding of the effects of FTAs on national IP systems the book addresses research questions that go beyond general publications on the topic Research questions include Is the combination of market access and IP rules in a bilateral FTA an effective and appropriate trade deal How are the IP requirements under the FTAs implemented into the national statutory framework Do the IP rules of FTAs sufficiently address institutional factors necessary for an effective IP system Do they provide for an appropriate balance between minimum protection and flexibilities and support relevant IP policy objectives The book covers the CAFTA DR member states Costa Rica the Dominican Republic El Salvador Guatemala Honduras and Nicaragua reviewing the implementation of FTA obligations regarding patents plant varieties test data trademarks geographical indications designs genetic resources and traditional knowledge enforcement and other areas By looking at several countries a broad range of IP rights and the practical implementation of FTA obligations this book provides a broad range of information and insights      *Global Business* Riad A. Ajami,G. Jason Goddard,2017-10-12 Globalization has been under extreme pressure in the wake of the financial crisis Multinational firms are weighing the costs and benefits of international scale and scope and are increasingly under pressure to hire local to source local and to pay taxes domestically At the same time global competitive pressures have intensified This book reviews international business practices from the multinational firm perspective and provides pathways forward concerning competitiveness and sustainability in global markets What sets this book apart from others is that the benefits and pitfalls of

globalization are addressed Chapter coverage focuses on the functional areas of the business and how they are impacted by international expansion Practical case studies supplement chapter coverage and highlight both positive and negative developments in the global business arena Readers should expect to be challenged on what will be the limits of the multinational firm in the future and how multinational firms can continue to prosper while at the same time adhere to sustainable business initiatives Equally useful to both undergraduate and graduate students of international business as well as professional development programs Global Business Competitiveness and Sustainability provides a necessary tonic for dealing with today's troubled seas of globalization

**Energy Abstracts for Policy Analysis**, 1979-11 A Macro Perspective on Technology Transfer Allan Reddy, 1996-08-30 Dr Reddy points out that the key to economic success particularly for the less developed countries of the world is technology but only when properly applied Despite years of help through technology transfer however many LDCs are still impoverished This leads him to conclude that either the wrong technologies were transferred or the right ones were not transferred His book thus focuses on ways in which LDCs can improve their economic growth through technology transfer arguing that it is the assimilation of technology into their socioeconomic and cultural structures that is critical to their economic development not the indiscriminate borrowing from advanced nations In doing so Dr Reddy presents a behavioral model which proves that technology absorption is just as if not more important than a simple transfer process A challenging research based discussion for academics in economics business sociology marketing and management and for business and government policymakers worldwide Dr Reddy introduces the concepts related to technology transfer and discusses the major participants in the worldwide transfer enterprise He presents barriers and ways to overcome them in technology transferral explores the ethical dimensions and then lays out his technology transfer assimilation model He applies the model to a specific and representative developing country India and ends with a discussion of conclusions that can be drawn from it His three appendixes elaborate on the need for and methods to transfer technology to LDCs provide ways to analyze the costs and present a model of reciprocal distribution that may benefit both the donor and the recipient country in the transfer process
