Ayres,2021-07-27 Eminent physicist and economist Robert Ayres examines the history of technology as a change agent in society focusing on societal roots rather than technology as an autonomous self perpetuating phenomenon With rare exceptions technology is developed in response to societal needs that have evolutionary roots and causes In our genus Homo language evolved in response to a need for our ancestors to communicate both in the moment and to posterity A band of hunters had no chance in competition with predators that were larger and faster without this type of organization which eventually gave birth to writing and music The steam engine did not leap fully formed from the brain of James Watt It evolved from a need to pump water out of coal mines driven by a need to burn coal instead of firewood in turn due to deforestation Later the steam engine made machines and mechanization possible Even quite simple machines increased human productivity by a factor of hundreds if not thousands That was the Industrial Revolution If we count electricity and the automobile as a second industrial revolution and the digital computer as the beginning of a third the world is now on the cusp of a fourth revolution led by microbiology These industrial revolutions have benefited many in the short term but devastated the Earth s ecosystems Can technology save the human race from the catastrophic consequences of its past success That is the question this book will try to answer      *Studies in Ancient Technology, Volume 6 Heat and Heating: Refrigeration, the Art of Cooling and Producing Cold: Light* Forbes,2023-07-24      **Production Technology** K.
