

Tectonic Plates

When geophysicist Alfred Wegener suggested in 1912 that the continents were moving, the idea seemed fantastic. There was no way to explain the idea. Only a half-century later, plate tectonic theory was able to offer an explanation of the phenomenon, including activity on the ocean floor, convection currents, and the melting of rock in the mantle power the continental drift that is still making the planet's surface today.

Continental Drift

The first ideas on continental drift came from the continents themselves. The continents were moving. They were moving apart, and they were moving together. They were moving in a way that was not possible if the continents were stationary. They were moving in a way that was not possible if the continents were stationary. They were moving in a way that was not possible if the continents were stationary.

The Hidden Motor

Convection currents of molten rock in the mantle are the hidden motor that drives the continents. They are moving apart, and they are moving together. They are moving in a way that was not possible if the continents were stationary. They are moving in a way that was not possible if the continents were stationary.
