Governing Global Electronic Networks William J. Drake,Ernest J. Wilson, III,2008-12-05

Experts analyze the global governance of electronic networks emphasizing international power dynamics and the concerns of nondominant actors. The burgeoning use and transformative impact of global electronic networks are widely recognized to be defining features of contemporary world affairs. Less often noted has been the increasing importance of global governance arrangements in managing the many issues raised in such networks. This volume helps fill the gap by assessing some of the key international institutions pertaining to global telecommunications regulation and standardization, radio frequency spectrum, satellite systems, trade in services, electronic commerce, intellectual property, traditional mass media, and Internet content. Internet names and numbers, cybercrime, privacy protection, and development. Eschewing technocratic approaches, the contributors offer empirically rich studies of the international power dynamics shaping these institutions. They devote particular attention to the roles and concerns of nondominant stakeholders such as developing countries and civil society and find that global governance often reinforces wider power disparities between and within nation states. But at the same time, the contributors note governance arrangements often provide nondominant stakeholders with the policy space needed to advance their interests more effectively. Each chapter concludes with a set of policy recommendations for the promotion of an open, dynamic, and more equitable networked world order.

The Oxford Handbook of Information and Communication Technologies Robin Mansell, 2007. The production and consumption of information and communication technologies or ICTs are becoming deeply embedded within our societies. The influence and implications of this have an impact at a macro level in the way our governments, economies, and businesses operate and at a micro level in our everyday lives. This handbook is about the many challenges presented by ICTs. It sets out an intellectual agenda that examines the implications of ICTs for individuals, organizations, democracy, and the economy. Explicitly interdisciplinary and combining empirical research with theoretical work, it is organized around four themes: covering the knowledge economy, organizational dynamics, strategy and design, governance and democracy, and culture, community, and new media literacies. It provides a comprehensive resource for those working in the social sciences and in the physical sciences and engineering fields with leading contemporary research informed principally by the disciplines of anthropology, economics, philosophy, politics, and sociology.

Global communications : opportunities for trade and aid. , 1995. Global Communications Opportunities for Trade and Aid examines the question of how telecommunication-related aid policies might be designed to support both United States trade and foreign aid goals. Communication and information technologies are particularly well suited in this regard. These technologies are of critical importance in today's knowledge-based global economy. Not only do they provide the networked infrastructure on which global businesses will increasingly take place, they also constitute one of the fastest growing sectors of world trade and

investment There is already mounting evidence and a growing appreciation of the positive role that information and communication technologies can play in supporting economic development By targeting poor and underserved areas telecommunication based aid programs have the potential to enhance U S trade opportunities in developing countries and promote competition and telecommunications regulatory reform while at the same time providing for the communities and people most in need To lay the groundwork for developing an effective telecommunications related aid strategy the report examines the likely scenarios for the deployment of communication and information technologies in support of global trade identifies the policy issues market failures and regulatory barriers that need to be overcome and identifies and analyzes telecommunications related foreign aid strategies that the federal government might pursue to address these problems
