Telecommunications Policy Have Regulators Dialed The Wrong Number:

Telecommunications Policy Donald L. Alexander, 1997-09-30 In this timely collection of essays leading economic and communication scholars examine major policy issues confronting federal and state regulators in the telecommunications industry The essays describe how past regulatory decisions have contributed to a growing tension between emerging competition and the preservation of specific social objectives like the continuance of universal service and thus provide a unique perspective on the current public policy debates Although each author discusses a different policy issue the common theme in this volume is the compelling argument that past regulatory decisions which were often motivated by political compromises rather than sound economic analysis are the primary source of inefficiency that exists in the telecommunications industry today This insight points to potential harm that legislators may create from ignoring economic forces when deregulating an industry The Telecommunications Act of 1996 is an example in which deregulation has created more not less regulatory barriers affecting competitors The authors challenge policy makers to consider no regulation to insure that competitive forces determine prices quantities and quality of service for the vast array of telecommunication services available in today's marketplace [Communications Deregulation and FCC Reform: Finishing the Job](#) Jeffrey A. Eisenach, Randolph J. May, 2012-12-06 Communications markets have made much progress towards competition and deregulation in recent years However it is increasingly clear in the age of the Internet and the digital revolution that much more needs to be done and that new approaches both at the Federal Communications Commission and in Congress will be required to complete the task In this volume the Progress and Freedom Foundation presents nine papers by communications policy experts and government policymakers that show how to finish the job of deregulating communications markets and reforming the FCC The Telecommunications Act of 1996 was a landmark piece of legislation for an industry moving from a monopoly orientation towards competition but additional steps are needed to complete the process of implementing the pro competitive deregulatory vision of the act Bringing together a group of the caliber represented in this book makes possible the best recommendations about the exact nature of those necessary changes In this volume the most difficult and politically charged hot button issues involving local and long distance competition universal service spectrum allocation program content regulation and the public interest doctrine are confronted head on As importantly the authors recommend specific reform proposals to be considered by the Federal Communications Commission and Congress The ideas contained in the experts essays were presented and debated at a conference hosted by The Progress Freedom Foundation which was held in Washington DC on December 8 2000 The Progress Freedom Foundation studies the impact of the digital revolution and its implications for public policy It conducts research in fields such as electronic commerce telecommunications and the impact of the Internet on government society and economic growth It also studies issues such as the need to reform government regulation especially in technology intensive fields such as medical innovation energy and environmental regulation **Ibss:**
