## **Teleological Language In The Life Sciences:**

**Teleological Language in the Life Sciences** Lowell A. Nissen, 1997 In this groundbreaking new study Lowell Nissen explores the use of teleological language in the study of subjects such as behaviorism negative feedback and natural selection He argues that all existing analyses fail to explain how teleological language can be used legitimately and provides his own analysis in terms of intentionality No God, No Science Michael Hanby, 2016-11-30 No God No Science Theology Cosmology Biology presents a work of philosophical theology that retrieves the Christian doctrine of creation from the distortions imposed upon it by positivist science and the Darwinian tradition of evolutionary biology Argues that the doctrine of creation is integral to the intelligibility of the world Brings the metaphysics of the Christian doctrine of creation to bear on the nature of science Offers a provocative analysis of the theoretical and historical relationship between theology metaphysics and science Presents an original critique and interpretation of the philosophical meaning of Darwinian biology

*On the Riddle of Life* Bohang Chen, 2024-09-12 This book presents a historico logical study of vitalism It begins by uncovering previously unknown doctrines of vitalism from the history of science encompassing biological physical and social sciences and then subjects these doctrines to a thorough logical analysis Through this process the book offers a unified conceptual framework to understand the major doctrines of vitalism in the history of science ultimately relating vitalism to the question of life Following the classical methodological approach endorsed by Immanuel Kant nineteenth century philosopher scientists like Ernst Mach and early twentieth century logical analysts including logical empiricists British analysts pragmatists Husserlian phenomenologists and neo Kantians this work provides unconventional and valuable perspectives on vitalism and the riddle of life appealing to a broad audience including scientists historians and philosophers of science particularly those from biological backgrounds **Ernest Nagel: Philosophy of Science and the Fight for**

**Aristotle on Teleology** Monte Ransome Johnson, 2005-11-03 Monte Johnson examines one of the most controversial aspects of Aristotle's natural philosophy his teleology Johnson argues that Aristotle's aporetic approach drives a middle course between these traditional oppositions and avoids the dilemma frequently urged against teleology between backwards causation and anthropomorphism Although these issues have been debated with extraordinary depth by Aristotle scholars and touched upon by many in the wider philosophical and scientific community as well there has been no comprehensive historical treatment of the issue **BOOK JACKET** What Functions Explain Peter McLaughlin, 2000-12-18 This 2001 book offers an examination of functional explanation as it is used in biology and the social sciences and focuses on the kinds of philosophical presuppositions that such explanations carry with them It tackles such questions as why are some things explained functionally while others are not What do the functional explanations tell us about how these objects are conceptualized What do we commit ourselves to when we give and take functional explanations in the life sciences and the social sciences McLaughlin gives a critical review of the debate on functional explanation in the philosophy of science He discusses the history of the philosophical question of teleology and provides a comprehensive review of the post war literature on functional explanation What Functions Explain provides a sophisticated and detailed Aristotelian analysis of our concept of natural functions and offers a positive contribution to the ongoing debate on the topic Self-organization and Emergence in Life Sciences Bernard Feltz, Marc Crommelinck, Philippe Goujon, 2006-07-10 Self organization constitutes one of the most important theoretical debates in contemporary life sciences The present book explores the relevance of the concept of self organization and its impact on such scientific fields as immunology neurosciences ecology and theories of evolution Historical aspects of the issue are also broached Intuitions relative to self organization can be found in the works of such key western philosophical figures as Aristotle Leibniz and Kant Interacting with more recent authors and cybernetics self organization represents a notion in keeping with the modern world's discovery of radical complexity The themes of teleology and emergence are analyzed by philosophers of sciences with regards to the issues of modelization and scientific explanation The implications of self organization for life sciences are here approached from an interdisciplinary angle revealing the notion as already rewarding and full of promise for the future **Life and Process** Spyridon A. Koutroufinis, 2014-05-21 Alfred North Whitehead is arguably the most original 20th century philosopher of nature and metaphysics In recent decades a number of physicists have produced ground breaking new theories in fundamental physics influenced by his process philosophy In contrast few biologists are even aware that Whitehead's radical rethinking of the Cartesian assumptions implicit in 19th century sciences might be relevant to their enterprise This book seeks to fill this gap by exploring how Whitehead's process ontology might provide a new philosophical foundation for the biosciences of the 21st century The central premise shared by all of the volume's authors is the idea that all living processes are irreducible

processes Each chapter focuses on assumptions implicit in some of the core concepts of biology such as organism evolution information and teleology that play crucial explanatory roles in the biosciences but as metaphysical concepts fall outside its purview The authors each identify important shortcomings implicit in contemporary biological paradigms and show how an approach grounded in a process oriented metaphysics can avoid them

**Vitalism and the Scientific Image in Post-Enlightenment Life Science, 1800-2010** Sebastian Normandin, Charles T. Wolfe, 2013-06-15 Vitalism is understood as impacting the history of the life sciences medicine and philosophy representing an epistemological challenge to the dominance of mechanism over the last 200 years and partly revived with organicism in early theoretical biology The contributions in this volume portray the history of vitalism from the end of the Enlightenment to the modern day suggesting some reassessment of what it means both historically and conceptually As such it includes a wide range of material employing both historical and philosophical methodologies and it is divided fairly evenly between 19th and 20th century historical treatments and more contemporary analysis This volume presents a significant contribution to the current literature in the history and philosophy of science and the history of medicine

N. Alexander, 2023-11-22 A secular redescription of teleology the study of purpose As 20th century geneticist J B S Haldane famously quipped Teleology is like a mistress to the biologist he dare not be seen with her in public but cannot live without her Teleology is the study of the purposes of nature As a scientific discipline it began its celebrated decline in the 17th century with the birth of modern empiricism and continued to plummet apace the rise of the Enlightenment Darwinism and quantum mechanics Those who continued to think nature could be purposeful were primarily spiritualists artists or madmen who credited the guidance of gods muses or fate But could a wholesale rejection of teleology be an overreaction Is there something in the idea as Haldane implies that we need Drawing on her experiences as a complexity theorist novelist and art theorist Victoria N Alexander examines the history and practices of teleology the study of purpose in nature as well as in human behavior She takes us inside paradoxically purposeful self organizing entities which somehow make themselves without having selves yet to do the making and she shows us how poetic like relationships things coincidentally like each other or metaphoric and things coincidentally near each other or metonymic help form organization where there was none before She suggests that it is these chance language like processes that result in emergent design and selfhood thereby offering an alternative to postmodern theories that have unfairly snubbed the purposeful artist Alexander claims that what has been missing from the general discussion of purposefulness is a theory of creativity without which there can be no purposeful action only robotic execution of inherited design Thus revising while reviving teleology she offers us a secular non essentialist conception of selfhood as an achievement that can be more than a momentary stay against the second law      **Functions in Biological and Artificial Worlds** Ulrich Krohs, Peter Kroes, 2009 Investigations into the relationship between organism and artifacts from the perspective of functionality      Myth-Busting in Science and Religion Jim Slagle, 2025-07-14 Science and religion is one of those subjects where everyone knows a lot of things that just ain't so This is because of the numerous urban legends about how the two fields have interacted historically and how they do so today These false beliefs are ubiquitous in Western civilization especially in academia prompting many people to oversimplify the issues This book corrects many of these urban legends and confusions involving premodern cosmology the alleged persecution or even martyrdom of scientists for discoveries that challenged the religious status quo the history and nature of biological evolution the potential discovery of rational extraterrestrial life and whether miracles would somehow conflict with the laws that science has discovered As one

might expect reality turns out to be much more complex than the stories suggest      Contemporary Debates in Philosophy of Biology Francisco J. **Teleological Language in the Life Sciences** Lowell A. Nissen, 1997 In this new study Lowell Nissen explores the use of teleological language in the study of subjects such as behaviorism negative feedback and natural selection He argues that all existing analyses fail to explain how teleological language can be used legitimately and he provides his own analysis in terms of intentionality Philosophers and scientists alike will find this book of greatest interest and value      *On Biopolitics* Marco Piasentier, 2020-07-07 In *On Biopolitics* Marco Piasentier discusses one of the most persistent questions in biopolitical theory the divide between nature and language and attempts to redraw the conceptual map which has traditionally defined the permissible paths to address this question Taking his cue from Foucault's exhortation to think philologically and biologically Piasentier traverses the main theoretical and methodological frameworks which have informed the biopolitical debate on nature and language biology and politics Biopolitical theory becomes the center of gravity for an investigation encompassing diverse philosophical models from the Heideggerian linguistic turn to post Darwinian naturalism The divide between traditions is not proof of an impossible encounter but constitutes the site for a new conceptual topography Working in this interdisciplinary space Piasentier puts into question the command of language and the ends of nature two vestiges of a human all too human worldview that preclude the possibility of thinking philologically and biologically about biopolitics On

Biopolitics An Inquiry into Nature and Language is essential reading for humanities and social sciences scholars with an interest in moving beyond debates about nature and language
