histograms and standard deviation were just some of the innovations pioneered by these mathematicians This book constitutes perhaps the first general survey of the mathematics of the Victorian period It assembles in a single source research on the history of Victorian mathematics that would otherwise be out of the reach of the general reader It charts the growth and institutional development of mathematics as a profession through the course of the 19th century in England Scotland Ireland and across the British Empire It then focuses on developments in specific mathematical areas with chapters ranging from developments in pure mathematical topics such as geometry algebra and logic to Victorian work in the applied side of the subject including statistics calculating machines and astronomy Along the way we encounter a host of mathematical scholars some very well known such as Charles Babbage James Clerk Maxwell Florence Nightingale and Lewis Carroll others largely forgotten but who all contributed to the development of Victorian mathematics

The Origins of the Telescope Albert Van Helden, Sven Dupré, Rob van Gent, 2010 The origins of the telescope have been discussed and debated since shortly after the instrument's appearance in The Hague in 1608 Civic and national pride have led local dignitaries popular writers and numerous scholars to search the archives and to construct sharply divergent histories Did the honor of the invention belong to the Dutch to the Italians to the English or to the Spanish And if the city of Middelburg in the Netherlands was in fact the cradle of the instrument was the true inventor Hans Lipperhey or his rival Zacharias Jansen Or was the instrument there before anyone knew it Over the past several decades a group of historians and scientists have sought out new documents re-examined familiar ones and tested early lenses and telescopes This volume contains the proceedings of a symposium held in Middelburg in September 2008 to mark 400 years of the telescope The essays in it taken as a whole present a new and convincing account of the origins of the instrument that changed mankind's vision of the universe

The Future of Small Telescopes in the New Millennium Terry D. Oswalt, 2012-12-06 The motivation for these volumes is to provide a vision for the future of small telescopes While this is an admirable task ultimately I believe that as happens all the time in science the prognostications will be overtaken by a rapidly changing scientific reality As Virginia Trimble points out in chapter 1 the kinds of big questions that face us as astronomers today are rather different than the ones that drove the construction of astronomical facilities through much of the twentieth century Right now it appears that small telescopes will not have a lot of influence in answering those questions though they will of course contribute enormously to the many issues discussed throughout the three volumes We are on the verge of opening a whole new parameter space that may revolutionize the way we think of small telescopes and their role in astronomy the domain of the rapidly variable sky While the LSST is the most prominent example it is a long way in the future Nemiroff Rafert chapter 2 consider the value of monitoring large parts of the sky on a continuous basis using technology similar to a webcam They have installed their CONCAM2 at four locations including Kitt Peak A related project built and operated by the Harvard graduate student Gaspar Bakos HAT-1 Hungarian Automated Telescope also is in operation at Kitt Peak
