A Scheme of Heaven: The History of Astrology and the Search for our Destiny in Data Alexander Boxer, 2020-01-14 An illuminating look at the surprising history and science of astrology civilization s first system of algorithms from Babylon to the present day Humans are pattern matching creatures and astrology is the universe s grandest pattern matching game In this refreshing work of history and analysis data scientist Alexander Boxer examines classical texts on astrology to expose its underlying scientific and mathematical framework Astrology he argues was the ancient world s most ambitious applied mathematics problem a monumental data analysis enterprise sustained by some of history s most brilliant minds from Ptolemy to al Kindi to Kepler Thousands of years ago astrologers became the first to stumble upon the powerful storytelling possibilities inherent in numerical data To correlate the configurations of the cosmos with our day to day lives astrologers relied upon a scheme of heaven or horoscope showing the precise configuration of the planets at a particular instant in time as viewed from a particular place on Earth Although recognized as pseudoscience today horoscopes were once considered a cutting edge scientific tool Boxer teaches us how to read these esoteric charts and appreciate the complex astronomical calculations needed to generate them by diagramming how the heavens appeared at important moments in astrology s history from the assassination of Julius Caesar as viewed from Rome to the Apollo 11 lunar landing as seen from the surface of the Moon He then puts these horoscopes to the test using modern data sets and statistical science arguing that today s data scientists do work similar to astrologers of yore By looking back at the algorithms of ancient astrology he suggests we can better recognize the patterns that are timeless characteristics of our own pattern matching tendencies At once critical rigorous and far ranging *A Scheme of Heaven* recontextualizes astrology as a vast technological project spanning continents and centuries that foreshadowed our data driven world today

Surveying the Skies Gareth Wynn-Williams, 2016-06-17 Since the time of Galileo astronomy has been driven by technological innovation With each major advance has come the opportunity and enthusiasm to survey the sky in a way that was not possible before It is these surveys of discovery that are the subject of this book In the first few chapters the author discusses what astronomers learned from visible light surveys first with the naked eye then using telescopes in the seventeenth century and photography in the nineteenth century He then moves to the second half of the twentieth century when the skies started to be swept by radio infrared ultraviolet x ray and gamma ray telescopes many of which had to be flown in satellites above the Earth s atmosphere These surveys led to the discovery of pulsars quasars molecular clouds protostars bursters and black holes He then returns to Earth to describe several currently active large scale projects that methodically collect images photometry and spectra that are then stored in vast publicly

Hubble showed that even our galaxy is but a tiny part of a universe that is rapidly expanding In describing these milestones of science Levy reveals his own spirited conversations with such luminaries of the imagination as the discoverer of the planet Pluto Clyde Tombaugh and one of the world s greatest science fiction writers Sir Arthur C Clarke Through Levy s unique perspective on cosmic discovery he is able to connect his own personal life story with that of astronomers of the past and by extension with the history of the whole universe As the codiscoverer of the spectacular comet that crashed into Jupiter Levy formulated a whole new range of exciting questions about the universe Do comets serve to transport the elements of life from one planet to the next What is the evidence that a large comet once hit the earth Will the earth someday be in danger of colliding with another such comet and will we have the technology to stop it This fascinating book will excite any of us who have stared at the night sky in awe and amazement David Levy and Wendee Wallach Levy Vail AZ are continuing their ongoing search for new comets David Levy is the president of the Jarnac Observatory science editor for PARADE magazine a contributing editor to Sky and Telescope and Sky News magazines and the author of Starry Nights The Quest for Comets and Impact Jupiter among other books The Search for Extra Terrestrial Intelligence David Lamb,2005-07-26 Is the Search for Extra Terrestrial Intelligence a genuine scientific research programme David Lamb evaluates claims and counter claims and examines recent attempts to establish contact with other intelligent life forms He considers the benefits and drawbacks of this communication how we should communicate and whether we actually can He also assesses competing theories on the origin of life on Earth discoveries of former solar planets proposals for space colonies and the consequent technical and ethical issues
