The Engineering-Business Nexus Steen Hyldgaard Christensen,Bernard Delahousse,Christelle Didier,Martin Meganck,Mike Murphy,2018-11-14 Fascinating and compelling in equal measure this volume presents a critical examination

of the multilayered relationships between engineering and business. In so doing the study also stimulates ethical reflection on how these relationships either enhance or inhibit strategies to address vital issues of our time. In the context of geopolitical, economic and environmental tendencies the authors explore the world that we should want to create and the role of the engineer and the business manager in this endeavor. Throughout this volume the authors identify periods of alignment and periods of tension between engineering and business. They look at focal points of the engineering business nexus related to the development of capitalism. The book explores past and present movements to reshape, reform or reject this nexus. The volume is informed by questions of importance for industry as well as for higher education. These are: What kinds of conflict arise for engineers in their attempts to straddle both professional and organizational commitments? How should professionals be managed to avoid a clash of managerial and professional cultures? How do engineers create value in firms and corporations? What kinds of tension exist between higher education and industry? What challenges does the neoliberal entrepreneurial university pose for management faculty, students, society and industry? Should engineering graduates be ready for work and can they possibly be? What kinds of business issues are reflected in engineering education curricula and for what purpose? Is there a limit to the degree of business hybridization in engineering degree programs and if so what would be the criterion for its definition? Is there a place in engineering education curricula for reflective critique of assumptions related to business and economic thinking? One ideal of management and control comes to the fore as the Anthropocene, the world transformed into an engineered artefact which includes human existence. The volume raises the question as to how engineering and business together should be considered given the fact that the current engineering business nexus remains embedded within an economic model of continual growth. By addressing macro level issues such as energy policy, sustainable development, globalization and social justice, this study will both help create awareness and stimulate development of self knowledge among practitioners, educators and students, thereby ultimately addressing the need for better informed citizens to safeguard planet Earth as a human life supporting system.

Invention by Design Henry Petroski, 1998-09-01. This book offers an insider's look at the political and cultural dimensions of design, development and production and reaffirms Petroski as the master explicator of the principles and processes that turn thoughts into the many things that define our material world.

Engineering—An Endless Frontier Sunny Y. AUYANG, 2009-06-30. Genetic engineering, nanotechnology, astrophysics, particle physics. We live in an engineered world, one where the distinctions between science and engineering, technology and research are fast disappearing. This book shows how at the dawn of the twenty-first century the goals of natural scientists to discover what was not known and that of engineers to create what did not exist are undergoing an unprecedented convergence. Sunny Y. Auyang ranges widely in demonstrating that engineering today is not only a collaborator with science but its equal. In concise accounts of the emergence of industrial laboratories and chemical and electrical engineering and in whirlwind histories of the machine tools and automobile industries and the rise of nuclear

energy and information technology her book presents a broad picture of modern engineering its history structure technological achievements and social responsibilities its relation to natural science business administration and public policies Auyang uses case studies such as the development of the F 117A Nighthawk and Boeing 777 aircraft as well as the experiences of engineer scientists such as Oliver Heaviside engineer entrepreneurs such as Henry Ford and Bill Gates and engineer managers such as Alfred Sloan and Jack Welch to give readers a clear sense of engineering s essential role in the future of scientific research
