How the California Electricity Crisis Generated a Green Wave Kurt Schuparra, 2024-12-30 This book provides the definitive account of a decade long transformation of energy policy in California with rippling consequences The author a state government insider during much of this period tells a story informed by personal experience access to the key actors of the time both then and now and extensive research California s risky experiment in deregulating the state s electricity market in the 1990s resulting in manipulation from unscrupulous energy providers and necessitating government action laid the foundation for a greener grid and greater energy efficiency in the early 2000s and beyond The book follows the state s energy journey through Democratic Governor Gray Davis s administration and his Republican successor Arnold Schwarzenegger s time in office providing a detailed behind the scenes account It highlights how this period influenced broader discussions of energy policy in the U S

culminating in President Barack Obama pledging bold action and securing 90 billion for clean energy programs in the 2009 stimulus bill the largest single green investment in history at that point in time The energy crisis provided a springboard for green growth by discrediting deregulation elevating public support and establishing a political pathway for a growing array of sustainable energy advocates This book engagingly balances policy considerations and political drama to reveal the untold details of how the electricity crisis paved the way for key climate and clean energy policies and offers unprecedented access to archival material from the Davis administration era It will be a must read for energy policymakers researchers and environmental historians

Reforming the Chinese Electricity Supply Sector Michael G. Pollitt, 2020-06-29 The Chinese electricity sector is the largest in the world covering well over 20% of the world's electricity supply While many other countries liberalized their electricity systems in the 1990s thereby creating competitive wholesale and retail electricity markets China's move towards liberalization has advanced at a slower pace until now Following the China State Council's publication of the No 9 document on Deepening Reform of the Power Sector this book reflects on the ambitious new round of reforms aimed at introducing competitive wholesale electricity markets and incentive regulation for its power grids Written in collaboration with Hao Chen Lewis Dale and Chung Han Yang this book provides lessons for China's reforms from international experience combining a detailed review of reforms from around the world with specific application to China and focuses on how the industrial price of electricity is determined in a liberalized power system

Failure by Design Georg Rilinger, 2024-08-19 A new framework for studying markets as the product of organizational planning and understanding the practical limits of market design The Western energy crisis was one of the great financial disasters of the past century The crisis began in April 2000 when price spikes started to rattle California's electricity markets Decades later some blame economic fundamentals and ignorant politicians while others accuse the energy sellers who raided the markets In *Failure by Design* sociologist Georg Rilinger offers a different explanation one that focuses on the practical challenges of market design The unique physical attributes of electricity made it exceedingly difficult to introduce markets into the coordination of the electricity system so market designers were brought in to construct the infrastructures that coordinate how market participants interact An exercise in social engineering these infrastructures were intended to guide market actors toward behavior that would produce optimal market results and facilitate grid management Yet though these experts spent their days worrying about incentive misalignment and market manipulation they unintentionally created a system riddled with opportunities for destructive behavior Rilinger's analysis not only illuminates the California energy crisis but also develops a broader theoretical framework for thinking about markets as the products of organizational planning and the limits of social engineering contributing broadly to sociological and economic thinking about the nature of markets

The Guilty Environmentalist Arthur O'Donnell, 2003 *The Guilty Environmentalist* is a collection of essays musings and political fantasies from award winning humorist and energy journalist Arthur O'Donnell Join the Guilty Environmentalist as he trips

lightly through this exploration of the history and foibles of the electric utility industry from the very beginnings of the Age of Electricity to the aftermath of California's most recent energy crisis. Selected from the best of the Bottom Lines columns carried in the nationally acclaimed California Energy Markets newsletter over the past decade, *The Guilty Environmentalist* provides a unique and frequently hilarious perspective on a crucial industry that most people take for granted until the lights go out. *Electricity Restructuring in the United States* Steve Isser, 2015-04-16 The electric utility industry in the US is technologically complex and its structure as a classic network industry makes it intricate in business terms as well so deregulation of such a complicated industry was a particularly detailed process. Steve Isser provides a detailed and comprehensive analysis of the history of the transformation of this complex industry from the 1978 Energy Policy Act to the present, covering the economic, legal, regulatory, and political issues and controversies in the transition from regulated utilities to competitive electricity markets. The book is a multidisciplinary study that includes a comprehensive review of the economic literature on electricity markets, the political environment of electricity policymaking, administrative and regulatory rulemaking, and the federal case law that restrained state and federal regulation of electricity. Isser offers a valuable case study of the pitfalls and problems associated with the deregulation of a complex network industry. *In the City of Neighborhoods* Arthur J. O'Donnell, 2004-12-03 It's like being in a small town right in the middle of a big city. People belong to their neighborhood first and that neighborhood belongs to the city. Karen Boyle, Seattle neighborhood activist. Seattle, Washington, has earned a national reputation as a City of Neighborhoods and a place where citizens take an active role in finding solutions to the problems of urban life. The efforts of Seattle's neighborhood-based councils and not-for-profit organizations were also seen as part of a national neighborhood movement that achieved prominence in the 1960s and 1970s. Originally completed in 1982 as a series of radio programs exploring the history and directions of the neighborhood movement, *In the City of Neighborhoods* was written and produced by award-winning journalist Arthur J. O'Donnell. The series also highlighted economic survival skills for non-profit organizations during an era of budget constraints. In this edition of *In the City of Neighborhoods*, O'Donnell augments his exploration of neighborhood activism with later articles covering the Not In My Back Yard (NIMBY) syndrome. This special section, called *It's My Backyard Too*, provides insights into the arguments and tactics of those who oppose power plants, transmission lines, and other energy developments. **Weak Links** Peter Csermely, 2009-06-11 How can our societies be stabilized in a crisis? Why can we enjoy and understand Shakespeare? Why are fruitflies uniform? How do omnivorous eating habits aid our survival? What makes the Mona Lisa's smile beautiful? How do women keep our social structures intact? Could there possibly be a single answer to all these questions? This book shows that the statement "weak links stabilize complex systems" provides the key to understanding each of these intriguing puzzles and many others too. The author, recipient of several distinguished science communication prizes, uses weak, low-affinity, low-probability interactions as a thread to introduce a vast variety of networks, from proteins to economics and ecosystems. Many

people from Nobel Laureates to high school students have helped to make the book understandable to all interested readers
This unique book and the ideas it develops will have a significant impact on many seemingly diverse fields of study
