Strings Conformal Fields And Topology:

Strings, Conformal Fields, and Topology Michio Kaku, 1991 Following on the foundations laid in his earlier book Introduction to Superstrings Professor Kaku discusses such topics as the classification of conformal string theories the non polynomial closed string field theory matrix models and topological field theory The presentation of the material is self contained and several chapters review material expounded in the earlier book This book provides students with an understanding of the main areas of current progress in string theory placing the reader at the forefront of current research

Strings, Conformal Fields, and Topology Michio Kaku, 2012-12-06 Following on the foundations laid in his earlier book Introduction to Superstrings Professor Kaku discusses such topics as the classification of conformal string theories the non polynomial closed string field theory matrix models and topological field theory The presentation of the material is self contained and several chapters review material expounded in the earlier book This book provides students with an understanding of the main areas of current progress in string theory placing the reader at the forefront of current research

Strings, Conformal Fields, and M-Theory Michio Kaku, 2012-12-06 String theory continues to progress at an astonishing rate and this book brings the reader up to date with the latest developments and the most active areas of research in the field Building on the foundations laid in his Introduction to Superstrings and M Theory Professor Kaku discusses such topics as the classification of conformal string theories knot theory the Yang Baxter relation quantum groups and the insights into 11 dimensional strings recently obtained from M theory New chapters discuss such topics as Seiberg Witten theory M theory and duality and D branes Several chapters review the fundamentals of string theory making the presentation of the material self contained while keeping overlap with the earlier book to a minimum This book conveys the vitality of the current research and places readers at its forefront

Conformal Field Theory Sergei V Ketov, 1995-02-28 Conformal field theory is an elegant and powerful theory in the field of high energy physics and statistics In fact it can be said to be one of the greatest achievements in the development of this field Presented in two dimensions this book is designed for students who already have a basic knowledge of quantum mechanics field theory and general relativity The main idea used throughout the book is that conformal symmetry causes both classical and quantum integrability Instead of concentrating on the numerous applications of the theory the author puts forward a discussion of the general methods of conformal field theory as a physical theory Hence the book provides in a self contained way the necessary knowledge and conformal intuition which underline the

various applications of conformal field theory It is aimed to assist students and professionals in the study of the theory from its first principles and in applying the methods in their own research The first of its kind this book promises to give a detailed and comprehensive insight into the workings of conformal field theory

Topological Geometrodynamics Matti Pitkanen, 2006-05 Topological Geometrodynamics is a modification of general relativity inspired by the conceptual problems related to the definitions of inertial and gravitational energy in general relativity Topological geometrodynamics can be also seen as a generalization of super string models Physical space times are seen as four dimensional surfaces in certain eight dimensional space The choice of this space is fixed by symmetries of the standard model so that geometrization of known classical fields and elementary particle quantum numbers results The notion of many sheeted space time allows re interpretation of the structures of perceived world in terms of macroscopic space time topology The generalization of the number concept based on fusion of real numbers and p adic number fields implies a further generalization of the space time concept allowing to identify space time correlates of cognition and intentionality Quantum measurement theory extended to a quantum theory of consciousness becomes an organic part of theory A highly non trivial prediction is the existence of a fractal hierarchy of copies of standard model physics with dark matter identified in terms of macroscopic quantum phases characterized by dynamical and quantized Planck constant The book is a comprehensive overview and analysis of topological geometrodynamics as a mathematical and physical theory

Mathematical Foundations of Quantum Field Theory and Perturbative String Theory Hisham Sati, Urs Schreiber, 2011-12-07 Conceptual progress in fundamental theoretical physics is linked with the search for the suitable mathematical structures that model the physical systems Quantum field theory QFT has proven to be a rich source of ideas for mathematics for a long time However fundamental questions such as What is a QFT did not have satisfactory mathematical answers especially on spaces with arbitrary topology fundamental for the formulation of perturbative string theory This book contains a collection of papers highlighting the mathematical foundations of QFT and its relevance to perturbative string theory as well as the deep techniques that have been emerging in the last few years The papers are organized under three main chapters Foundations for Quantum Field Theory Quantization of Field Theories and Two Dimensional Quantum Field Theories An introduction written by the editors provides an overview of the main underlying themes that bind together the papers in the volume

Fields, Strings, and Duality Theoretical Advanced Study Institute in Elementary Particle Physics 1996, Boulder, Colo, Brian Greene, 1997 The past year has witnessed truly remarkable developments in our understanding of string theory Fields Strings and Duality TASI 96 is an invaluable collection of review papers on the subject contributed by the most prominent researchers in the field This volume is a scientific treasure for graduate students researchers and all others who are interested in the progress of theoretical physics Publisher's website

Superstrings, Geometry, Topology, and C^ -algebras* Robert S. Doran, Greg Friedman, Jonathan Rosenberg, 2010-10-13 This volume contains the proceedings of an NSF CBMS Conference held at Texas Christian

University in Fort Worth Texas May 18 22 2009 The papers written especially for this volume by well known mathematicians and mathematical physicists are an outgrowth of the talks presented at the conference Topics examined are highly interdisciplinary and include among many other things recent results on D brane charges in K homology and twisted K homology Yang Mills gauge theory and connections with non commutative geometry Landau Ginzburg models C algebraic non commutative geometry and ties to quantum physics and topology the rational homotopy type of the group of unitary elements in an Azumaya algebra and functoriality properties in the theory of C crossed products and fixed point algebras for proper actions An introduction written by Jonathan Rosenberg provides an instructive overview describing common themes and how the various papers in the volume are interrelated and fit together The rich diversity of papers appearing in the volume demonstrates the current interplay between superstring theory geometry topology and non commutative geometry The book will be of interest to graduate students mathematicians mathematical physicists and researchers working in these areas
