Abstract. Since the reform and opening up in 1978, China has developed rapidly and become the world's second-largest economy. However, during the post-reform era, China was once considered as one of the poorest countries in the world. Though it appeared a fast growth rate of GDP driven by the construction of heavy industry, its excessive industrial structure and the resulting economic structure brought huge obstacles to its economic development and improvement in people's living standard.

Keywords: developing countries, development strategy, industrial structure, trinity of traditional economic system, comparative advantage

1. Introduction

From the new structural economics perspective, in consideration of the factor endowment structure, comparative advantage and firms' viability [1], this essay aims to provide a historical review of China's traditional economic system during the pre-reform period: How it was formed and what are its impacts. In addition, compare the different economies around the world which adopted the same heavy-industry oriented development strategy and formed the similar economic system and seeks to find a general pattern of the dismal performance in traditional economic system.

2. The Formation and Logic of the Traditional Economic System

2.1. Explanations of the Strategic Choice

After the founding of the People's Republic of China, the leaders of the new regime were faced with the problem of choosing a development strategy that can quickly achieve the ideal of strengthening the country and enriching the people. Given the poor foundation of China's poor economic development, Chinese leaders chose the strategy of putting the construction of heavy industry in priority, to drive the entire process of industrialization. It is accepted that three main reasons affected this decision.

Firstly, from the perspective of international competition. Research of industrial structure indicates that the extent of industrialization is related to the proportion of heavy industry in the industrial structure of an economy [2]. By analyzing developed countries at that time, it is clear that a strong heavy industry represents modernization. The high proportion of heavy industry indicates the level of national economic development and economic strength. To accelerate the process of modernization and improve the economic strength, China is inclined to put heavy industry in priority.

Secondly, the restrict of international political and economic environment. Due to the outbreak of the Korean War in 1950 and the military standoff with the Kuomintang regime, the appeal of constructing a strong national defense has emerged. Meanwhile, western capitalist countries imposed political isolation, economic blockade and sanctions on China, which cut off the normal international trade of China. This international political, economic and military situation makes it urgent for China to quickly establish its relatively complete and self-contained industrial structure, of which heavy industry is the key.
