Joseph M. Scandura

Structural Learning I Theory And Research II Issues And Approaches:

Structural Learning (Volume 2) Joseph M. Scandura, 2017-09-13 Originally published in 1976 this title is an edited volume and reflects the major approaches being taken in structural learning at the time Chapter 1 deals with the basic question of whether competence knowledge should be characterized in terms of rules automata on the one hand or associations on the other The bulk of Chapter 2 is devoted to a series of earlier experiments on rule learning by the editor and his associates The two contributions in Chapter 3 deal with graph theoretical models Piagetian models constitute the subject of Chapter 4 Chapter 5 deals with attempts to stimulate human behaviour with a computer Chapter 6 ranges over a wide variety of competence models with particular reference to logic and mathematics In Chapter 7 the editor proposes a new theory of structural learning together with some empirical results

Structural Learning (Volume 1) Joseph M. Scandura, 2017-09-13 Originally published in 1973 this book was published in two volumes In the first volume the author describes what he sees as the rudiments of three deterministic partial theories of structural learning The first involves competence partial theories which deal only with the problem of how to account for the various kinds of behavior of which people are typically capable Special attention is given to mathematical competence Nothing is said about learning or performance The second partial theory is concerned with motivation learning and performance under idealized conditions and is obtained from the first partial theory by imposing further structure on it This theory says nothing about memory of the limited capacity of human subjects to process information The final theory is obtained from the second by making additional assumptions which bring memory and finite information processing into the picture The theory is still partial however since no attempt is made to deal with certain ultra short term behavioral phenomena which appear to depend directly on particular physiological characteristics
