Thomas Felix Hickerson

Structural Frameworks:

Stability Functions for Structural Frameworks D. B. Chandler, Thomas Felix Hickerson, 1934 Computer Analysis of Structural Frameworks James A. D. Balfour, 1992 Structural analysis is conducted during the preliminary design of civil structures such as bridges airplanes to ensure their feasibility Once the outline design is complete the structure is analyzed in detail to assess its strength and stiffness This procedure structural analysis is therefore inextricably bound up with structural design It is one of the tools that the designer uses to ensure economy and safety of the final structure Of the many different ways in which computer technology has affected the engineering profession it is in the field of structural analysis that the impact has been most profound The computer's ability to handle vast amounts of arithmetic with speed and accuracy has made computationally intensive methods viable This book offers an overview of this critical field The authors use short computer programs to perform each of the standard procedures used in commercial structural analysis programs The programs are written in BASIC and are designed to run on any computer from a desktop microcomputer to a mainframe machine Each program is clear and complete in itself Also presented are a number of structural analysis programs for a number of different framework types This second edition illustrates the simplicity and flexibility of the stiffness method by considering problems in the field of structural dynamics The text is designed for students and professionals in civil mechanical structural and aeronautical engineering **Structural Frameworks** Clyde T. Morris, Samuel T. Carpenter, 1949 Logical Frameworks Gerard Huet, G. Plotkin, 1991 In Logical Frameworks first published in 1991 Huet and Plotkin gathered contributions from the first International Workshop on Logical Frameworks The contributions are of the highest calibre Four main themes are covered the general problem of representing formal systems in logical frameworks basic algorithms of general use in proof assistants logical issues and large scale experiments with proof assistants **Structure and Architecture** Angus J. Macdonald, 2018-10-26 This thoroughly updated edition of Angus J Macdonald's insightful book Structure and Architecture offers an in depth analysis of structural design and its relationship with architecture It draws on clear explanations of the connections between structural form structural performance and architectural design to explore the interface between the technical and the visual in architecture Additional chapters in this new edition cover the fields of structural theory structural philosophy the contributions of prominent engineers to the evolution of Modern architecture and the concept and practice of sustainable design Fully illustrated this critical appraisal of structures is a core curriculum text for students of architecture structural engineering and architectural history and is also a valuable resource for practitioners of these disciplines **Structural Frameworks** Samuel T. Carpenter, 1943

Structures and Architecture Paulo J. Cruz, 2016-10-14 Although the disciplines of architecture and structural engineering have both experienced their own historical development their interaction has resulted in many fascinating and delightful structures To take this interaction to a higher level there is a need to stimulate the inventive and creative design of

architectural structures and to persuade architects and structural engineers to further collaborate in this process exploiting together new concepts applications and challenges This set of book of abstracts and full paper searchable CD ROM presents selected papers presented at the 3rd International Conference on Structures and Architecture Conference ICSA2016 organized by the School of Architecture of the University of Minho Guimar es Portugal July 2016 to promote the synergy in the collaboration between the disciplines of architecture and structural engineering *Materials and Structures* R. Whitlow,2014-06-03 The second edition of this highly informative book retains much original material covering the principles of structural mechanics and the strength of materials together with the underlying concepts requisite to the theory of structure and structural design Some of the material involving lengthy hand drawing or hand calculation has been replaced with more up to date relevant material and frequent reference is made to computer aided learning techniques

Optimization and Artificial Intelligence in Civil and Structural Engineering B.H. Topping,2013-03-14 This volume and its companion volume includes the edited versions of the principal lectures and selected papers presented at the NATO Advanced Study Institute on Optimization and Decision Support Systems in Civil Engineering The Institute was held in the Department of Civil Engineering at Heriot Watt University Edinburgh from June 25th to July 6th 1989 and was attended by eighty participants from Universities and Research Institutes around the world A number of practising civil and structural engineers also attended The lectures and papers have been divided into two volumes to reflect the dual themes of the Institute namely Optimization and Decision Support Systems in Civil Engineering Planning for this ASI commenced in late 1986 when Andrew Templeman and I discussed developments in the use of the systems approach in civil engineering A little later it became clear that much of this approach could be realised through the use of knowledge based systems and artificial intelligence techniques Both Don Grierson and John Gero indicated at an early stage how important it would be to include knowledge based systems within the scope of the Institute The title of the Institute could have been Civil Engineering Systems as this would have reflected the range of systems applications to civil engineering problems considered by the Institute These volumes therefore reflect the full range of these problems including structural analysis and design water resources engineering geotechnical engineering transportation and environmental engineering
