**What Makes Humans Unique** Michael Robbins, 2023-09-08 Through an integrated multi disciplinary theory Michael Robbins proposes that the human mind consists of two mental structures the one we share with other animate creatures and a capacity for reflective representational thought which is unique As an alternative to Freud's model of the human mind as structured by the id ego and superego this book contends that the prolonged period of post natal immaturity otherwise known as neoteny which is specific to humans gives rise to reflective representational thought that in turn allows for the acquisition of complex knowledge Robbins examines how Freud's conception of the human mind was limited by his ignorance of the related disciplines of sociology primatology cultural anthropology and most notably evolution which were then in their infancy to explore the implications of the non unitary nature of the human mind for us as individuals as a society and for our future as a species Drawing on a broad range of influences from psychoanalysis to anthropology biology psychology sociology and politics this book will be of interest to

Marc Marschark, Harry Knoors, 2020-04-15 In recent years the intersection of cognitive psychology developmental psychology and neuroscience with regard to deaf individuals has received increasing attention from a variety of academic and educational audiences Both research and pedagogy have addressed questions about whether deaf children learn in the same ways that hearing children learn how signed languages and spoken languages might affect different aspects of cognition and cognitive development and the ways in which hearing loss influences how the brain processes and retains information There are now a number of preliminary answers to these questions but there has been no single forum in which research into learning and cognition is brought together The Oxford Handbook of Deaf Studies in Learning and Cognition aims to provide this shared forum focusing exclusively on learning cognition and cognitive development from theoretical psychological biological linguistic social emotional and educational perspectives Each chapter includes state of the art research conducted and reviewed by international experts in the area Drawing this research together this volume allows for a synergy of ideas that possesses the potential to move research theory and practice forward

### **The Human Difference** Michael

Robbins, 2023-10-02 From a multidisciplinary perspective grounded in psychoanalysis this book explores the manifestations of mind that distinguish humans from other species culture civilization and destructiveness Psychoanalysis was created by Freud in an effort to understand neurosis and psychosis the names he gave to individual human destructiveness His understanding was limited and incorrect because the science of evolution and the disciplines of sociology and cultural anthropology were in their infancy when he formulated his ideas He did not comprehend that destructiveness is qualitatively different in humans than in other species and he ignored the problem of how biological instincts become mental processes These limitations left psychoanalysis with one of its most perplexing unsolved problems the mysterious leap from mind to body This book explains how neoteny the prolonged period of postnatal immaturity that distinguishes humans from other animals requires and enables complex learning from caregivers It is the knowledge acquired from this learning and its intergenerational transmission that links the biological theory of evolution with the psychosocial theory of psychoanalysis and explains how the human species is unique This book will be of interest to those who want to learn about how integrating the findings of evolutionary science primatology sociology and cultural anthropology with the theory of psychoanalysis expands our understanding of what makes humans unique and its implications for the future of our species and how it empowers us to influence the destiny of humankind
