Cognitive Structures in Scientific Inquiry Roberto Festa, Atocha Aliseda, Adriana Johanna Maria Peijnenburg, 2005 This book is the first of two volumes devoted to the work of Theo Kuipers a leading Dutch philosopher of science Philosophers and scientists from all over the world thirty seven in all comment on Kuipers philosophy and each of their commentaries is followed by a reply from Kuipers The present volume focuses on Kuipers views on confirmation empirical progress and truth approximation as laid down in his *From Instrumentalism to Constructive Realism* Kluwer 2000 In this book Kuipers offered a synthesis of Carnap's and Hempel's confirmation theory on the one hand and Popper's theory of truth approximation on the other The key element of this synthesis is a sophisticated methodology which enables the evaluation of theories in terms of their problems and successes even if the theories are already falsified and which also fits well with the claim that one theory is closer to the truth than another Ilkka Niiniluoto Patrick Maher John Welch Gerhard Schurz Igor Douven Bert Hamminga David Miller Johan van Benthem Sjoerd Zwart Thomas Mormann Jes's Zamora Bonilla Isabella Burger andamp Johannes Heidema Joke Meheus Hans Mooij and Diderik Batens comment on these ideas of Kuipers and many present their own account The present book also contains a synopsis of *From Instrumentalism to Constructive Realism* It can be read independently of the second volume of *Essays in Debate with Theo Kuipers* which is devoted to Kuipers *Structures in Science* 2001

Cognitive Structures in Scientific Inquiry, 2016-08-01 This book is the second of two volumes devoted to the work of Theo Kuipers a leading Dutch philosopher of science Philosophers and scientists from all over the world thirty seven in all comment on

Kuipers philosophy and each of their commentaries is followed by a reply from Kuipers The present volume is devoted to Kuipers neo classical philosophy of science as laid down in his *Structures in Science* Kluwer 2001 Kuipers defends a dialectical interaction between science and philosophy in that he views philosophy of science as a meta science which formulates cognitive structures that provide heuristic patterns for actual scientific research including design research In addition Kuipers pays considerable attention to the computational approaches to philosophy of science as well as to the ethics of doing research Thomas Nickles David Atkinson Jean Paul van Bendegem Maarten Franssen Anne Ruth Mackor Arno Wouters Erik Weber Helena de Preester Eric Scerri Adam Grobler Andrzej Wisniewski Alexander van den Bosch Gerard Vreeswijk Jaap Kamps Paul Thagard Emma Ruttkamp Robert Causey Henk Zandvoort comment on these ideas of Kuipers and many present their own account The present book also contains a synopsis of *Structures in Science* It can be read independently of the first volume of *Essays in Debate with Theo Kuipers* which is devoted to Kuipers *From Instrumentalism to Constructive Realism* 2000 *The Nature of Scientific Theory* Lawrence Sklar, 2014-06-23 About the Series Contemporary philosophy of science combines a general study from a philosophical perspective of the methods of science with an inquiry again from the philosophical point of view into foundational issues that arise in the various special sciences Methodological philosophy of science has deep connections with issues at the center of pure philosophy It makes use of important results for example in traditional epistemology metaphysics and the philosophy of language It also connects in various ways with other disciplines such as the history and sociology of the sciences with pure logic and with such branches of mathematics as probability theory These volumes are for the most part devoted to readings in the methodological aspects of the philosophy of science One volume however takes up the philosophical issues in the foundations of a particularly important special science that is the issues in the foundations of theories of contemporary physics The methodological volumes cover a number of crucial general problem areas The first volume takes up issues in the nature of scientific explanation and the related issues of the nature of scientific law and of the casual relation among events The second volume explores issues in the nature and structure of scientific theories The third volume collects inquiries into the nature of scientific change as one theory is replaced by another Volume four is devoted to readings concerning the nature of probability and the nature and justification of inductive reasoning in science The following volume continues the exploration of the issue of confirming and rejecting theories with a series of readings devoted to Bayesian methodologies in science and to the exploration of non inductive strategies for rationalizing belief Finally volume six explores three major problem areas in the foundation of physics the nature and rationale for physical theories of space and time the interpretive problems arising out of the quantum theory and some puzzles arising out of statistical mechanical theories of physics The readings are selected and arranged to provide the user with systematic access to the most important contemporary themes in methodological philosophy of science and in philosophy of physics The selections include many recent contributions to the

field as well as papers and extracts from books and journals otherwise not easily available
