

Chemical bonding in crystalline solids

ionic bond

An idealized ionic (or electrovalent) bonding of oppositely charged ions.

covalent bond

Covalent bonds involve electron sharing, such as between these carbon atoms when they form a diamond.

metallic bond

metallic structure, showing possible electron (e^-) paths around the nuclei of metal atoms (represented as spheres with a positive charge)

Metallic bonding can be thought of as a cloud of positively charged ions immersed in a cloud of valence electrons.

van der Waals bond

weak dipole attraction of van der Waals bond

Neutral molecules may be held together by a weak electric force known as the van der Waals bond.

Structure And Bonding In Crystals:

Structure and Bonding in crystals Michael O'Keeffe, 2012-12-02 Structure and Bonding in Crystals presents a new understanding of the older topics such as bond length bond strength and ionic radii These concepts have been used by geochemists and geophysicists to systematize and predict phase transitions at high pressure The final group of chapters deals with the problems of classifying complex solids and with systematic descriptions of the relationships between their structures This book comprises 13 chapters with the first presenting a historical perspective by Linus Pauling The following chapters then go on to discuss quantum theory and crystal chemistry pseudopotentials and crystal structure quantum defect orbital radii and the structural chemistry of simple solids and a pseudopotential viewpoint of the electronic and structural properties of crystals Other chapters cover elementary quantitative theory of chemical bonding the role and significance of empirical and semiempirical correlations theoretical probes of bonding in the disiloxo group a comparison of experimental and theoretical bond length and angle variations the role of nonbonded forces in crystals molecules within infinite solids charge density distributions and some aspects of the ionic model of crystals This book will be of interest to practitioners in the fields of chemistry physics and geology

Structure and Bonding in crystals Alexandra Nsvrotsky, 2012-12-02 Structure and Bonding in Crystals Volume II discusses the factors determining crystal structure This book examines the principles of structure and bonding in complex solids Divided into 13 parts this volume begins with an overview of the development of atomic pseudopotentials and the discovery that they could be applied directly to atoms in crystals This book then provides an understanding of other relevant topics including ionic radii bond strength and bond length Other chapters focus on the problems of classifying complex solids and describe the relationship between their structures This text also describes the alloy structure to help know how compounds react or transform This book further explores the geometrical relationships between different structure types in crystals The final chapter deals with the contribution of Mooser and Pearson in the study of energy band theory and chemical bonding Solid state physicists and chemists geophysicists metallurgists and ceramists will find this book extremely useful

Structure and Bonding in Crystalline Materials Gregory S. Rohrer, 2001-07-19 One of the motivating questions in materials research today is how can elements be combined to produce a solid with specified properties This book is intended to acquaint the reader with established principles of crystallography and cohesive forces that are needed to address the fundamental relationship between the composition structure and bonding Starting with an introduction to periodic trends the book discusses crystal structures and the various primary and secondary bonding types and finishes by describing a number of models for predicting phase stability and structure Containing a large number of worked examples exercises and detailed descriptions of numerous crystal structures this book is primarily intended as an advanced undergraduate or graduate level textbook for students of materials science It will also be useful to scientists and engineers who work with solid materials
