Structure Argument:

Aspects of Argument Structure Acquisition in Inuktitut Shanley Allen, 1996-11-22 This book discusses the first language acquisition of three morphosyntactic mechanisms of transitivity alternation in arctic Quebec Inuktitut. Data derive from naturalistic longitudinal spontaneous speech samples collected over a nine month period from four Inuit children. Both basic and advanced forms of passive structures are shown to be used productively by Inuktitut speaking children at an early age relative to English speaking children but consistent in age with speakers of non Indo European languages reported on in the literature. Potential explanations of this difference include frequency of caregiver input and details of language structure. Morphological causatives appear slightly later in the acquisition sequence and their first instances reflect use of unanalyzed routines. Lexical causatives are present from the earliest ages studied. Evidence of a period of overgeneralization of lexical causatives in one subject at the same time as the morphological causative shows signs of being productively acquired suggests that the seeming overgeneralization may reflect nothing more than as yet unstable use of the morphological causative. Noun incorporation structures are shown to be used productively by Inuktitut speaking children at an early age relative to Mohawk speaking children. Potential explanations of this difference include details of language structure and relative language use in the environments of the learners. Findings are considered in light of current debates in the literature concerning continuity versus maturation of grammatical structure and concerning the functional categories available to the child at early stages of acquisition. Data presented argue against late maturation and suggest that all functional categories may be accessed by the Inuktitut speaking child early in the acquisition process. **A lexicalist account of argument**

structure Stefan Müller, 2018 There are two prominent schools in linguistics: Minimalism (Chomsky) and Construction Grammar (Goldberg, Tomasello). Minimalism comes with the claim that our linguistic capabilities consist of an abstract binary combinatorial operation Merge and a lexicon. Most versions of Construction Grammar assume that language consists of flat phrasal schemata that contribute their own meaning and may license additional arguments. This book examines a variant of Lexical Functional Grammar which is lexical in principle but was augmented by tools that allow for the description of phrasal constructions in the Construction Grammar sense. These new tools include templates that can be used to model inheritance hierarchies and a resource driven semantics. The resource driven semantics makes it possible to reach the effects that lexical rules had, for example remapping of arguments by semantic means. The semantic constraints can be evaluated in the syntactic component which is basically similar to the delayed execution of lexical rules. So this is a new formalization that might be suitable to provide solutions to longstanding problems that are not available for other formalizations. While the authors suggest a lexical treatment of many phenomena and only assume phrasal constructions for selected phenomena like benefactive and resultative constructions in English, it can be shown that even these two constructions should not be treated phrasally in English and that the analysis would not extend to other languages. As for instance German, I show that the new

formal tools do not really improve the situation and many of the basic conceptual problems remain Since this specific proposal fails for two constructions it follows that proposals in the same framework that assume phrasal analyses for all constructions are not appropriate either The conclusion is that lexical models are needed and this entails that the schemata that combine syntactic objects are rather abstract as in Categorical Grammar Minimalism HPSG and standard LFG On the other hand there are constructions that should be treated by very specific phrasal schemata as in Construction Grammar and LFG and HPSG So the conclusion is that both schools are right and wrong and that a combination of ideas from both camps is needed

Preferred Argument Structure John W. Du Bois, Lorraine Edith Kumpf, William J. Ashby, 2003-01-01 Preferred Argument Structure offers a profound insight into the relationship between language use and grammatical structure In his original publication on Preferred Argument Structure Du Bois 1987 demonstrated the power of this perspective by using it to explain the origins of ergativity and ergative marking systems Since this work the general applicability of Preferred Argument Structure has been demonstrated in studies of language after language In this collection the authors move beyond verifying Preferred Argument Structure as a property of a given language They use the methodology to reveal more subtle aspects of the patterns for example to look across languages diachronically or synchronically to examine particular grammatical relations and to examine special populations or particular genres This volume will appeal to linguists interested in the relationship of pragmatics and grammar generally in the typology of grammatical relations and in explanations derived from data and corpus based approaches to analysis

Critical Thinking, fourth edition William Hughes, Jonathan Lavery, 2004-08-31 William Hughes's Critical Thinking recently revised and updated by Jonathan Lavery is a comprehensive and accessible introduction to the essential skills required to make strong arguments Hughes and Lavery give a thorough treatment of such traditional topics as deductive and inductive reasoning logical fallacies and how to spot them the importance of inference how to recognise and avoid ambiguity and how to assess what is or is not relevant to an argument But they also cover a variety of topics not always treated in books of this sort special concerns to keep in mind when reasoning about ethical matters and how the nature of a language can affect the structure of an argument The book gives a lucid treatment of the differences between descriptive and evaluative meaning one person's freedom fighter is another person's terrorist For the fourth edition Jonathan Lavery has added a new chapter on scientific reasoning expanded the treatment of analogies added numerous examples and revised and updated the text throughout
