Analysing Structure in Academic Writing Tomoko Sawaki,2016-09-14 This book breaks through formalistic traditions to propose a new generic structure analytical framework for academic writing The integrated approach taking lessons from cognitive linguistics and structuralism offers a foundation for establishing research and pedagogy that can promote diversity and inclusion in academia The simplicity of the flexible structure analytical model proposed by Sawaki enables the user to analyse diverse instances of genre Further innovation is made in the analysis of generic structure components by integrating George Lakoff and Mark Johnson s metaphor analysis method so that the model can account for cultural and ideological patterns that structure our abstract thinking Using these integrations the author has established a structure analytical model that can take into account linguistic cognitive and pragmatic aspects of genre Researchers in the fields of linguistics discourse studies cultural studies education and English for Academic Purposes will be able to use this model to identify whether an atypical instance in academic texts is a result of the writer s individual failure or a failure to understand diversity in academic writing Proceedings of 1st International Conference on Structural Damage Modelling and Assessment Magd Abdel Wahab,2020-12-12 This book comprises the select proceedings of Structural Damage Modelling and Assessment SDMA 2020 presented online on 4 5 August 2020 It discusses the recent advances in fields related to damage modelling damage detection and assessment non destructive testing and evaluation structure integrity and structural health monitoring The conference covers all research topics and applications relevant to structural damage modelling and assessment using theoretical numerical and experimental techniques This book is useful to scientists and engineers in academia and industry

Lectures on Formal Methods and Performance Analysis Ed Brinksma, Holger Hermanns, Joost-Pieter Katoen, 2003-06-29 Traditionally models and methods for the analysis of the functional correctness of reactive systems and those for the analysis of their performance and predictability aspects have been studied by different research communities This has resulted in the development of successful but distinct and largely unrelated modeling and analysis techniques for both domains In many modern systems however the difference between their functional features and their performance properties has become blurred as relevant functionalities become inextricably linked to performance aspects e g isochronous data transfer for live video transmission During the last decade this trend has motivated an increased interest in combining insights and results from the field of formal methods traditionally based on functionality with techniques for performance modeling and analysis Prominent examples of this cross fertilization are extensions of process algebra and Petri nets that allow for the automatic generation of performance models the use of formal proof techniques to assess the correctness of randomized algorithms and extensions of model checking techniques to analyze performance requirements automatically We believe that these developments mark the beginning of a new paradigm for the modeling and analysis of systems in which qualitative and quantitative aspects are studied from an integrated perspective We are convinced that the further work towards the realization of this goal will be a growing source of inspiration and progress for both communities
