The Major Prose Of Thomas Henry Huxley:

The Major Prose of Thomas Henry Huxley Thomas Henry Huxley, 1997 Thomas Henry Huxley 1825-1895 was one of the intellectual giants of Victorian England. A surgeon by training, he became the principal exponent of Darwinism and popularizer of scientific naturalism. Huxley was a prolific essayist and his writings put him at the center of intellectual debate in England during the later half of the nineteenth century. *The Major Prose of Thomas Henry Huxley* fills a very real and pressing chasm in history of science books, bringing together almost all of Huxley's major nontechnical prose, including *Man's Place in Nature* and both *Evolution in Ethics* and its *Prolegomena*. *Free Will and Determinism in Joseph Conrad's Major Novels* Ludwig Schnauder, 2009 Preliminary Material Introduction Free Will and Determinism A Philosophical Introduction Free Will and Determinism in Nineteenth and Early Twentieth Century Britain Conrad and the Problem of Free Will *Heart of Darkness* and the Empire Machine *Nostromo* and the Mechanics of History *The Secret Agent* and the Urban Jungle Conclusion Works Cited [Fifty Major Thinkers on Education](#) Joy Palmer, Liora Bresler, David Cooper, 2002-09-11 In this unique work, some of today's greatest educators present concise, accessible summaries of the great educators of the past. Covering a time span from 500 BC to the early twentieth century, each essay gives key biographical information, an outline of the individual's principal achievements and activities, an assessment of their impact and influence, a list of their major writings, and suggested further reading. Together with *Fifty Modern Thinkers on Education*, this book provides a unique reference guide for all students of education. **The Cambridge History of the Gothic: Volume 2, Gothic in the Nineteenth Century** Catherine Spooner, 2020-08-06 This second volume of *The Cambridge History of the Gothic* provides a rigorous account of the Gothic in British, American, and Continental European culture from the Romantic period through to the Victorian fin de siècle. Here, leading scholars in the fields of literature, theatre, architecture, and the history of science and popular entertainment explore the Gothic in its numerous interdisciplinary forms and guises, as well as across a range of different international contexts. As much a cultural history of the Gothic in this period as an account of the ways in which the Gothic mode has participated in the formative historical events of modernity, the volume offers fresh perspectives on familiar themes while also drawing new critical attention to a range of hitherto overlooked concerns. From Romanticism to Penny Bloods, Dickens, and even the railway system, the volume provides a compelling and comprehensive study of nineteenth-century Gothic culture. **Routledge Encyclopaedia of Educational Thinkers** Joy A. Palmer, Cooper, 2016-05-20 The *Routledge Encyclopaedia of Educational Thinkers* comprises 128 essays by leading scholars analysing the most important, influential, innovative, and interesting thinkers on education of all time. Each of the chronologically arranged entries explores why a particular thinker is significant for those who study education and explores the social, historical, and political contexts in which the thinker worked. Ranging from Confucius and Montessori to Dewey and Edward de Bono, the entries form concise, accessible summaries of the greatest or most influential educational thinkers of past and present times. Each essay includes

the following features concise biographical information on the individual an outline of the individual s key achievements and activities an assessment of their impact and influence a list of their major writings suggested further reading Carefully brought together to present a balance of gender and geographical contexts as well as areas of thought and work in the broad field of education this substantial volume provides a unique history and overview of figures who have shaped education and educational thinking throughout the world Combining and building upon two internationally renowned volumes this collection is deliberately broad in scope crossing centuries boundaries and disciplines The Encyclopaedia therefore provides a perfect introduction to the huge range and diversity of educational thought Offering an accessible means of understanding the emergence and development of what is currently seen in the classroom this Encyclopaedia is an invaluable reference guide for all students of education including undergraduates and post graduates in education or teacher training and students of related disciplines

Darwin and the Bible Richard H. Robbins, 2015-10-05 For courses in evolution creationism or as a supplemental item in biology and or biological anthropology courses Darwin and the Bible helps readers to understand the nature history and passions behind the debate over scientific and religious versions of creation and human origins Darwin and the Bible The Cultural Confrontation is about the history and nature of the disputes over human origins that arose with the publication of Charles Darwin s book *Origin of Species* in 1859 The readings in the text provide the historical theological social and political backgrounds of the debate Rather than trying to demonstrate the truth of Darwinian evolution this book seeks to help the reader understand why the debate over Darwin and the Bible remains as contentious as ever The book seeks to examine why Darwin s theory of evolution appears threatening to some people and likewise to help understand why some scientists often react with such emotion to challenges to their views The contributors include biological scientists social scientists social historians and proponents of the importance of God faith and religion in peoples lives

Nostromo , 2021-11-15 In the century since its publication in 1904 Nostromo has taken its place among Conrad s masterpieces as a panoramic novel of revolution and a profound meditation on history and the effects of material interests on human destiny The eight new essays brought together in this volume examine the novel from various perspectives as an epic as a study in colonialism and the problem of homecoming as an exploration of free will and determinism as a textual artefact and as a reflection upon earlier works of European literature by Coleridge Pushkin and others

Alice in Space Gillian Beer, 2016-11-30 The award winning literary critic takes readers down the rabbit hole of Victorian cultural and intellectual influences on Lewis Carroll s Alice books In Alice s Adventures in Wonderland and Through the Looking Glass Lewis Carroll created fantastic worlds that continue to live in the minds of readers today Carroll conceived his Alice books during the 1860s a time of intense intellectual upheaval as new scientific linguistic educational and mathematical ideas flourished around the world Alice in Space explores these historic currents revealing essential context for Carroll s jokes concerns and hidden references Parody and Punch evolutionary debates philosophical dialogues educational works for children math and

logic manners and rituals dream theory and childhood studies all fueled the fireworks of Carroll's restless imagination In this lively investigation Gillian Beer convincingly shows him at play in the spaces of Victorian cultural and intellectual life drawing on then current controversies reading prodigiously across many fields and writing on multiple levels to please both children and adults in different ways With a welcome combination of learning and lightness Beer reminds us that Carroll's books are essentially about the risks and pleasures of curiosity Along the way Alice in Space shares Alice's exceptional ability to spark curiosity in us too

Newman in the Story of Philosophy

D. J. Pratt Morris-Chapman, 2021-07-01 Saint John Henry Newman is widely acknowledged to be an important theologian Despite this Newman commentators believe that his work has received little recognition by philosophers This book explores whether or not Newman's supposed philosophical isolation constitutes a misconception in Newman historiography First of all it does this by examining Newman's general philosophical reception over the last two centuries surveying a wide range of philosophical positions and philosophers from the many different branches of this discipline The book then focuses upon whether or not Newman has made a contribution to one specific philosophical position seldom given attention within Newman scholarship the particularist approach to epistemology In its investigations into this and the other more general dimension of Newman's philosophical reception the book offers an historical re evaluation of Newman's philosophical legacy

The Making of Modern Science David Knight, 2013-04-26 Of all the

inventions of the nineteenth century the scientist is one of the most striking In revolutionary France the science student taught by men active in research was born and a generation later the graduate student doing a PhD emerged in Germany In 1833 the word scientist was coined forty years later science increasingly specialised was becoming a profession Men of science rivalled clerics and critics as sages they were honoured as national treasures and buried in state funerals Their new ideas invigorated the life of the mind Peripatetic congresses great exhibitions museums technical colleges and laboratories blossomed and new industries based on chemistry and electricity brought prosperity and power economic and military Eighteenth century steam engines preceded understanding of the physics underlying them but electric telegraphs and motors were applied science based upon painstaking interpretation of nature The ideas discoveries and inventions of scientists transformed the world lives were longer and healthier cities and empires grew societies became urban rather than agrarian the local became global And by the opening years of the twentieth century science was spreading beyond Europe and North America and women were beginning to be visible in the ranks of scientists Bringing together the people events and discoveries of this exciting period into a lively narrative this book will be essential reading both for students of the history of science and for anyone interested in the foundations of the world as we know it today *The Making of the Humanities, Volume III* Rens Bod, Jaap Maat, Thijs Weststeijn, 2025-10-01 This comprehensive history of the humanities focuses on the modern period 1850 2000 The contributors including Floris Cohen Lorraine Daston and Ingrid Rowland survey the rise of the humanities in interaction with the natural and social sciences offering new perspectives on the interaction between disciplines in Europe and Asia and new insights generated by digital humanities **The Ashgate Research Companion to Modern Imperial Histories** John Marriott, 2016-03-23 Written by leading scholars this collection provides a comprehensive and authoritative overview of modern empires Spanning the era of modern imperial history from the early sixteenth century to the present it challenges both the rather insular focuses on specific experiences and gives due attention to imperial formations outside the West including the Russian Japanese Mughal Ottoman and Chinese The companion is divided into three broad sections Part I Times surveys the three main eras of modern imperialism The first was that dominated by the settlement impulse with migrants many voluntarily and many more by force making new lives in the colonies This impulse gave way most especially in the nineteenth century to a period of busy and rapid expansion which was less likely to promote new settlement and in which colonists more frequently saw their sojourn in colonial lands as temporary and related to the business mostly of governance and trade Lastly in the twentieth century in particular empires began to fail and to fall Part II Spaces studies the principal imperial formations of the modern world Each chapter charts the experience of a specific empire while at the same time placing it within the complex patterns of wider imperial constellations The individual chapters thus survey the broad dynamics of change within the empires themselves and their relationships with other imperial formations and reflect critically on the ways in which these topics have been approached in the literature In Part III Themes

scholars think critically about some of the key features of imperial expansion and decline These chapters are brief and many are provocative They reflect the current state of the field and suggest new lines of inquiry which may follow from more comparative perspectives on empire The broad range of themes captures the vitality and diversity of contemporary scholarship on questions of empire and colonialism encompassing political economic and cultural processes central to the formation and maintenance of empires as well as institutions ideologies and social categories that shaped the lives both of those implementing and those experiencing the force of empire In these pages the reader will find the slave and the criminal the merchant and the maid the scientist and the artist alongside the structures which sustained their lives and their livelihoods Overall the companion emphasises the diversity of imperial experience and process Comprehensive in its scope it draws attention to the particularities of individual empires rather than over generalising as if all empires at all times and in all places behaved in a similar manner It is this contingent and historical specificity that enables us to explore in expansive ways precisely what constituted the modern empire

The Philosophy of Enchantment R. G. Collingwood, 2005 This is the long awaited publication of a set of writings by the British philosopher historian and archaeologist R G Collingwood on critical anthropological and cultural themes only hinted at in his previously available work At the centre of the book are six chapters of a study of folktale and magic composed by Collingwood in the mid 1930s and intended for development into a book Here Collingwood applies the principles of his philosophy of history to problems in the long term evolution of human society and culture This is preceded in Part I by a range of contextualizing material on such topics as the relations between music and poetry the nature of language the value of Jane Austen's novels the philosophy of art and the relations between aesthetic theory and artistic practice Part III of the volume consists of two essays one on the relationship between art and mechanized civilization and the second written in 1931 on the collapse of human values and civilization leading up to the catastrophe of armed conflict These offer a devastating analysis of the consequences that attend the desertion of liberal principles indeed of all politics as such in the ultimate self annihilation of military conquest The volume opens with three substantial introductory essays by the editors authorities in the fields of critical and literary history social and cultural anthropology and the philosophy of history and the history of ideas they provide their explanatory and contextual notes to guide the reader through the texts The Philosophy of Enchantment brings hitherto unrecognized areas of Collingwood's achievement to light and demonstrates the broad range of Collingwood's intellectual engagements their integration and their relevance to current areas of debate in the fields of philosophy cultural studies social and literary history and anthropology

Shapes of Time in British Twenty-First Century Quantum Fiction Sonia Front, 2015-09-04 This book addresses the notion of time and temporality and its various conceptualizations in the theories of the new physics utilized as a thematic and formal framework in the British novel of the twenty first century As the Newtonian conception of reality does not provide a reliable framework within which to situate human experience and generate meaning fiction writers have recognized quantum

mechanics as a potent source from which to draw in search of new metaphors The quantum has become a part of the understanding of reality and its concepts and assumptions have been absorbed into the textual structure and content of literary fiction *Shapes of Time in British Twenty First Century Quantum Fiction* examines human temporality as mediated by the timeshapes imagined within the context of the new physics and explores the philosophical implications for human temporality and identity of situating an individual within the realm of physical time Its chapters deal with various concepts of the new physics connected with temporality and their appropriation in a selected novel parallel universes in Andrew Crumey's *Sputnik Caledonia* 2008 eternal recurrence and Poincaré's theorem in David Mitchell's *Cloud Atlas* 2004 chaos theory in Samantha Harvey's *The Wilderness* 2009 and the end of time in Scarlett Thomas's *The End of Mr Y* 2006 Each of them corresponds to a different conceptual shape of time tree concertina spiral and snapshot respectively which is enacted on the formal level Analyzing the new time constructs in a narrative this book thus uncovers passages between scientific and humanistic standpoints and reveals quantum fiction to be an effective tool for visualizing the subjective non homogenous experience of private time

[Did Darwin Write the Origin Backwards?](#) Elliott Sober, 2011-03-31 Is it accurate to label Darwin's theory the theory of evolution by natural selection given that the concept of common ancestry is at least as central to Darwin's theory Did Darwin reject the idea that group selection causes characteristics to evolve that are good for the group though bad for the individual How does Darwin's discussion of God in *The Origin of Species* square with the common view that he is the champion of methodological naturalism These are just some of the intriguing questions raised in this volume of interconnected philosophical essays on Darwin The author's approach is informed by modern issues in evolutionary biology but is sensitive to the ways in which Darwin's outlook differed from that of many biologists today The main topics that are the focus of the book common ancestry group selection sex ratio and naturalism have rarely been discussed in their connection with Darwin in such penetrating detail Author Professor Sober is the 2008 winner of the Prometheus Prize This biennial award established in 2006 through the American Philosophical Association is designed to honor a distinguished philosopher in recognition of his or her lifetime contribution to expanding the frontiers of research in philosophy and science This insightful collection of essays will be of interest to philosophers biologists and laypersons seeking a deeper understanding of one of the most influential scientific theories ever propounded

Objectivity Lorraine Daston, Peter L. Galison, 2021-02-02 Objectivity has a history and it is full of surprises In *Objectivity* Lorraine Daston and Peter Galison chart the emergence of objectivity in the mid nineteenth century sciences and show how the concept differs from alternatives truth to nature and trained judgment This is a story of lofty epistemic ideals fused with workaday practices in the making of scientific images From the eighteenth through the early twenty first centuries the images that reveal the deepest commitments of the empirical sciences from anatomy to crystallography are those featured in scientific atlases the compendia that teach practitioners of a discipline what is worth looking at and how to look at it Atlas images define the

working objects of the sciences of the eye snowflakes galaxies skeletons even elementary particles Galison and Daston use atlas images to uncover a hidden history of scientific objectivity and its rivals Whether an atlas maker idealizes an image to capture the essentials in the name of truth to nature or refuses to erase even the most incidental detail in the name of objectivity or highlights patterns in the name of trained judgment is a decision enforced by an ethos as well as by an epistemology As Daston and Galison argue atlases shape the subjects as well as the objects of science To pursue objectivity or truth to nature or trained judgment is simultaneously to cultivate a distinctive scientific self wherein knowing and knower converge Moreover the very point at which they visibly converge is in the very act of seeing not as a separate individual but as a member of a particular scientific community Embedded in the atlas image therefore are the traces of consequential choices about knowledge persona and collective sight Objectivity is a book addressed to any one interested in the elusive and crucial notion of objectivity and in what it means to peer into the world scientifically **Evolutionary Pragmatism and**

Ethics Beth L. Eddy, 2015-11-11 In the late nineteenth century culture critics who were readers of Darwin's work on evolution pondered what the implications of natural selection might be for human culture religion and ethics American pragmatists by and large rejected a social Darwinian spin on ethics economics and theology in favor of a less determinate humanist version of the ethical implications that emphasized contingency and meliorism The early arguments between T H Huxley and William Sumner over the issues mirrors the contemporary arguments between Stephen Jay Gould and others against the New Atheists determinate interpretation of cultural implications which largely echo the social Darwinists position but in the current language of sociobiology The work of pragmatists such as William James George Santayana Jane Addams and John Dewey detail an evolutionary perspective that rejects the moral implications of social Darwinism Public Understanding of Science David Knight, 2006-10-16 Answering questions such as whether the interesting parts of science be conveyed in sermons poems pictures and journalism Knight explores the history of science to show how the successes and failures of our ancestors can help us understand the position science comes to occupy now
