AISE Steel Technology, 2003 *Handbook on Material and Energy Balance Calculations in Material Processing, Includes CD-ROM* Arthur E. Morris, H. Alan Fine, Gordon Harold Geiger, 2011-09-06 This book approaches the subject of material and energy balances from two directions First it emphasizes the fundamental principles of the conservation of mass and energy and the consequences of these two principles Second it applies the techniques of computational chemistry to materials processing and introduces new software developed by the author especially for material and heat balances The third edition reflects the changes in the professional engineer's practice in the last 30 years reflecting the dramatic shift away from metallurgical engineering and the extractive industry towards materials engineering A large and growing number of recent graduates are employed in such fields as semiconductor processing environmental engineering and the production and processing of advanced and exotic materials for aerospace electronic and structural applications The advance in computing power and software for the desktop computer has significantly changed the way engineers make computations and the biggest change comes from the computational approach used to solve problems The spreadsheet program Excel is used extensively throughout the text as the main computational engine for solving material and energy balance equations and for statistical analysis of data The use of Excel and the introduction of the add in programs enables the study of a range of variables on critical process parameters and emphasis is placed on multi device flowsheets with recycle bypass and purge streams whose material and heat balance equations were previously too complicated to solve by the normally used hand calculator The Excel based program FlowBal helps the user set up material and heat balance equations for processes with multiple streams and units

Fundamentals of Metallurgy S Seetharaman, 2005-10-10 As product specifications become more demanding manufacturers require steel with ever more specific functional properties As a result there has been a wealth of research on how those properties emerge during steelmaking Fundamentals of metallurgy summarises this research and its implications for manufacturers The first part of the book reviews the effects of processing on the properties of metals with a range of chapters on such phenomena as phase transformations types of kinetic reaction transport and interfacial phenomena Authors discuss how these processes and the resulting properties of metals can be modelled and predicted Part two discusses the implications of this research for improving steelmaking and steel properties With its distinguished editor and international team of contributors Fundamentals of metallurgy is an invaluable reference for steelmakers and manufacturers requiring high performance steels in such areas as automotive and aerospace engineering It will also be useful for those dealing with non ferrous metals and alloys material designers for functional materials environmentalists and above all high technology industries designing processes towards materials with tailored properties Summarises key research and its implications for manufacturers Essential reading for steelmakers and manufacturers Written by leading experts from both industry and academia

Innovative Process Development in Metallurgical

Industry Vaikuntam Iyer Lakshmanan, Raja Roy, V. Ramachandran, 2015-10-26 This book describes the phases for innovative metallurgical process development from concept to commercialization Key features of the book include Need for process innovation Selection and optimization of process steps Determination of the commercial feasibility of a process including engineering and equipment selection Determination of the environmental footprint of a process Case study examples of innovative process development

The Coal Handbook: Towards Cleaner Production Dave Osborne, 2013-10-31 Coal remains an important fossil fuel resource for many nations due to its large remaining resources relatively low production and processing cost and potential high energy intensity Certain issues surround its utilisation however including emissions of pollutants and growing concern about climate change The coal handbook Towards cleaner production Volume 2 explores global coal use in industry Part one is an introductory section which reviews the social and economic value of coal emissions from coal utilisation the handling impact and utilisation of coal waste and an exploration of emerging and future issues around industrial coal utilization Chapters in part two highlight coal resources production and use in established markets as well as the emerging markets of Brazil the Russian Federation India Indonesia and China Part three focuses specifically on coal utilisation in industry Chapters consider thermal coal utilisation coal use in iron and steel metallurgy advances in pulverised fuel technology and the evaluation of coal for thermal and metallurgical applications Further chapters explore coal utilisation in the cement and concrete industries coal gasification and conversion and value in use assessment for thermal and metallurgical coal A final chapter summarises the anticipated future pathway towards sustainable long term coal use suggesting transitions that will be needed to ensure cleaner utilisation for many decades to come With its distinguished editor and international team of expert contributors The coal handbook Volumes 1 and 2 is a comprehensive and invaluable resource for professionals in the coal mining preparation and utilisation industry those in the power sector including plant operators and engineers and researchers and academics interested in this field Reviews the social and economic value of coal emissions from coal utilisation and the handling impact and utilisation of coal waste Explores emerging and future issues around industrial coal utilization Highlights coal resources production and use in established markets as well as emerging markets such as Brazil the Russian Federation India Indonesia and China
