Thought , Neuroexistentialism Gregg D. Caruso, Owen J. Flanagan, 2018 Existentialisms arise when the foundations of being such as meaning morals and purpose come under assault In the first wave of existentialism writings typified by Kierkegaard Dostoevsky and Nietzsche concerned the increasingly apparent inability of religion and religious tradition to support a foundation of being Second wave existentialism personified philosophically by Sartre Camus and de Beauvoir developed in response to similar realizations about the overly optimistic Enlightenment vision of reason and the common good The third wave of existentialism a new existentialism developed in response to advances in the neurosciences that threaten the last vestiges of an immaterial soul or self Given the increasing explanatory and therapeutic power of neuroscience the mind no longer stands apart from the world to serve as a foundation of meaning This produces foundational anxiety In Neuroexistentialism a group of contributors that includes some of the world's leading philosophers neuroscientists cognitive scientists and legal scholars explores the anxiety caused by third wave existentialism and possible responses to it Together these essays tackle our neuroexistentialist predicament and explore what the mind sciences can tell us about

Neuro Nikolas Rose, Joelle M. Abi-Rached, 2013-02-21 How the new brain sciences are transforming our understanding of what it means to be human The brain sciences are influencing our understanding of human behavior as never before from neuropsychiatry and neuroeconomics to neurotheology and neuroaesthetics Many now believe that the brain is what makes us human and it seems that neuroscientists are poised to become the new experts in the management of human conduct Neuro describes the key developments theoretical technological economic and biopolitical that have enabled the neurosciences to gain such traction outside the laboratory It explores the ways neurobiological conceptions of personhood are influencing everything from child rearing to criminal justice and are transforming the ways we know ourselves as human beings In this emerging neuro ontology we are not determined by our neurobiology on the contrary it appears that we can and should seek to improve ourselves by understanding and acting on our brains Neuro examines the implications of this emerging trend weighing the promises against the perils and evaluating some widely held concerns about a neurobiological colonization of the social and human sciences Despite identifying many exaggerated claims and premature promises Neuro argues that the openness provided by the new styles of thought taking shape in neuroscience with its contemporary conceptions of the neuromolecular plastic and social brain could make possible a new and productive engagement between the social and brain sciences Copyright note Reproduction including downloading of Joan Miro works is prohibited by copyright laws and international conventions without the express written permission of Artists Rights Society ARS New York

An Analysis of Oliver Sacks's The Man Who Mistook His Wife for a Hat and Other Clinical Tales Dario Krpan, Alexander O' Connor, 2017-07-05 In The Man Who Mistook His Wife for a Hat neurologist Oliver Sacks looked at the cutting edge work taking place in his field and decided that much of it was not fit for purpose Sacks found it hard to understand why most doctors adopted a mechanical and impersonal approach to their patients and opened his mind to new ways to treat people with neurological disorders He explored the question of deciding what such new ways might be by deploying his formidable creative thinking skills Sacks felt the issues at the heart of patient care needed redefining because the way they were being dealt with hurt not only patients but practitioners too They limited a physician's capacity to

understand and then treat a patient's condition. To highlight the issue, Sacks wrote the stories of 24 patients and their neurological clinical conditions. In the process, he rebelled against traditional methodology by focusing on his patients' subjective experiences. Sacks did not only write about his patients in original ways; he attempted to come up with creative ways of treating them as well. At root, his method was to try to help each person individually with the core aim of finding meaning and a sense of identity despite or even thanks to the patient's condition. Sacks thus redefined the issue of neurological work in a new way, and his ideas were so influential that they heralded the arrival of a broader movement: narrative medicine, that placed stronger emphasis on listening to and incorporating patients' experiences and insights into their care.
