Managing Creative People Gordon Torr, 2011-01-19 A clash between the ideology of growth and the growth of ideas between control and creativity between measurement and the immeasurable between predictability and the fickle muses of inspiration in engulfing our boardrooms In this scathing swipe at the institutionalised idiocy that is stifling creativity just at the time the world needs it most Gordon Torr draws from the leading lights of creativity research to demolish the myths that surround the generation of ideas in the modern organisation The curse of the brainstorm the commoditisation of creative talent the deskilling of the imagination the startling inadequacies of management theory these and the many other horrors of idea assassination that run rampant in creative sector companies are dissected and disembowelled in this hilarious expose of the drama that unfolds every time a new idea slides across the boardroom table This book sets out to address the black hole that surrounds the management of creative people debunking many myths of creativity and outlining a revolutionary approach to the pressing issue of creative productivity in the contemporary creative sector company A handbook of tools techniques methods and practical ideas whose USP is a framework for thinking about efficient creative management how to extract value from creative time Gordon Torr presents a logical argument that puts in place the building blocks of the author's knowledge and experience towards the final architecture We need them as never before And we know that they're somehow different Yet the productive management of creative people is an almost totally neglected science I doubt if there's a single industry that wouldn't gain immediate advantage from Gordon Torr's scrupulous and enlightening detective work

Global Innovation Management J. Christopher Westland, 2017-09-16 This is an exciting new edition of a core textbook that explores innovation management from a global perspective. Innovation management is increasingly significant both as an academic discipline and as an integral part of the way businesses seek to change and grow. However, the key factors behind successful innovation and the process by which innovation is turned into profit in the global arena remain largely undefined. The new edition provides a unique answer to these questions and offers a step by step guide to innovation strategy development taking into account the global context in which businesses today operate. Written by a highly experienced instructor, this is an ideal companion for undergraduate students of innovation as well as postgraduate and MBA students taking modules with an innovation component. New to this Edition: Completely rewritten and restructured to explore in more depth how innovative ideas are identified and strategized in an increasingly globalized world. Fully updated and extended case studies on world leading companies. Increased attention to commercialized innovation including factors such as intellectual property laws, technology acceleration and the competition for venture capital and finance. Coverage of new topics such as open innovation and service innovation. Expanded coverage of the tools and methods needed to understand financial gain and risk.

Intellectual Property Statistics Eskil Ullberg, 2023-09-01 Patents and other intellectual property (IP) rights are increasingly part of cross border trade in their own rights. Patent transfers and patent licensing between inventors, investors and innovators create new business strategies of cooperation in the creation of new technology, increasing the productivity in the stock of technology assets and efficient distribution of these rights. The rights bundles are then used also increasingly in products and services being traded cross border, furthering economic efficiency created by this cooperative strategy. Today's international trade statistics, however, lack statistics explicitly on trade flows from ideas based on IP rights. This book offers an idea based statistical framework to measure IP, i.e. increasingly depends on trade in ideas and explores ways to introduce the framework into international standards. Specifically, it offers a theory of value to measure the flows from IP and an asset view of IP to deal with allocation of resources and who owns these rights. This is then contrasted with the current way IP is treated and a gap analysis is used to identify what needs to change in the standards. This new framework can help develop theories, policies, practices and inform the decisions needed to better leverage the human capital formation of inventors everywhere.

Praise for Intellectual Property Statistics In this book Prof Ullberg has undertaken a Herculean task to lay out a paradigm for the collection of IP Statistics to ensure that the market of trade in ideas has the information and data necessary to function well. The volume should be viewed as a starting point, a work in progress, but an important one that could very well influence the development of this important set of data on trade in ideas. At a time when global issues require both new ideas and the spread of those ideas widely to help ensure both economic growth and continued global economic convergence, data that helps us monitor and evaluate what is happening in trade in ideas will be extremely valuable.
