The Making And Breaking Of Affectional Bonds:

The Making & Breaking of Affectional Bonds John Bowlby, 1979 **The Making and Breaking of Affectional Bonds** John Bowlby, 1999 **Understanding Grief** Richard Gross, 2015-10-05 Understanding Grief is a comprehensive and accessible one stop introduction to all the major models of grief In addition to the individual perspective bereavement is discussed in relation to social cultural and religious factors and influences Richard Gross also examines the impact of different types of bereavement such as the death of a child parent spouse partner and sibling and discusses the impact of traumatic death in relation to complicated grief The text also covers pet loss death anxiety and post traumatic growth This innovative book combines personal accounts of grief with clinical accounts of patients provided by psychiatrists and psychologists and research involving large numbers of bereaved individuals Understanding Grief will be invaluable to all those working with bereaved clients including bereavement counsellors counselling and clinical psychologists healthcare professionals social workers and the interested layperson It is also suitable for people training to work with bereaved individuals Sex Offenders and the Internet Dennis Howitt, Kerry Sheldon, 2009-09-28 Online the opportunity to commit a crime is never more than a few clicks away Sex Offenders and the Internet explores the nature of online sex offenders in order to help practitioners understand and treat this new category of client Kerry Sheldon and Dennis Howitt examine the research base by reviewing case studies and psychological profiles with a particular focus on paedophilic Internet sex offenders Issues covered include child pornography the often overlooked excuses for paedophilia and how we can move forward The result is a book that comprehensively details the nature of Internet sex offenders bringing together the relevant research into one essential volume **Interpersonal Psychotherapy 2E A Clinician's Guide** Scott Stuart, Michael Robertson, 2012-08-31 This book provides a very useful and thought provoking account of a developing form of interpersonal psychotherapy and gives a clear guide for practising clinicians Psychological Medicine First published in 2003 this groundbreaking text firmly established itself as a touchstone for all therapists using interpersonal psychotherapy IPT Key features Complexity of the Self V. F. Guidano, 1987-05-09 In this profound work Vittorio Guidano expands upon his earlier seminal contributions on the application of cognitive and developmental principles to individuals struggling with various forms of psychopathology Here he fully develops the idea that individuals experience both positive and negative are powerfully influenced by their personal psychological organizations Focusing primarily on the eating disorders the phobias with agoraphobia as the prototype obsessive compulsive patterns and depression Guidano illustrates how early developmental experiences and ongoing psychological processes may collude to perpetuate dysfunctional patterns and personal distress The central and perhaps most exciting thesis in this new expression of Guidano's thinking is that the deep structure or core organizing processes that constrain human psychological experience may be at the heart of successful intervention as well as the classical problems of resistance relapse and refractory behaviors Guidano's contention is at once

simple and powerful those psychological processes involved in the development and maintenance of personal identity or self that should be the primary foci of research and intervention in psychological disorders The meaning of Guidano's perspective for clinical practice is perhaps best expressed in the author's own words Knowing the basic elements of the personal cognitive organization that underlie the pattern of disturbed behavior and emotions the therapist can behave from the beginning in such a way as to build a relationship as effective as possible for that particular client In other words the therapist should be able to establish a relationship that respects the client's personal identity and systemic coherence and that at the same time does not confirm the basic pathogenic assumptions For example in working with agoraphobics the therapist has to respect their self images centered on the need to be in control He/she can do this by avoiding any direct attack on their controlling attitudes and by leaving them a wide margin of control in the relationship At the same time the therapist should avoid confirming their assumptions about the somatic origin of their emotional disturbances or about their inborn fragility In short the therapist who can anticipate the models of self and reality tacitly entertained by the client is surely better able to help the development of a cooperative and secure therapeutic relationship than the therapist who cannot make such anticipations This timely and provocative volume offers exciting new ideas about how to conceptualize and facilitate change in the self system With the rare combination of his Renaissance intellect and integrative practical expertise Guidano has been able to draw together many disparate themes from object relations theory ego psychology attachment theory constructivist models of human cognition and lifespan developmental psychology It is must reading for the practicing professional the helping apprentice and anyone interested in glimpsing the cutting edge at the growing interface between cognitive and clinical science

Theories of Object Relations Howard A. Bacal, Kenneth M. Newman, 1990 A comprehensive account of the work of the major contributors to object relations theories this book covers the work of the major American and British contributors to object relations theory focusing on the ways in which these theories anticipated and enriched the emerging field of self psychology

Psychoanalytic Conversations Peter L. Rudnytsky, 2013-06-17 In this stunning addition to what has of late become a distinct genre of psychoanalytic literature Peter Rudnytsky presents 10 substantive and provocative interviews with leading analysts with theorists from allied fields and with influential Freud critics In conversations that Rudnytsky succeeds in making psychoanalytic both in form and in content he guides his interlocutors to unforeseen reflections on the events and forces that shaped their lives and on the personal and intellectual grounds of their beliefs and practices Rudnytsky a ranking academic scholar of psychoanalysis and the humanities approaches his subjects with not only a highly attuned third ear but also a remarkable grasp of theoretical historical and clinical issues When his interviewees turn from autobiographical narratives to matters of theory and clinical practice Rudnytsky is clear about his own intellectual allegiance to the Independent tradition of object relations theory and his admiration for John Bowlby and attachment theory His willingness to set forth his own point of view and occasionally to press a line of questioning infuses his exchanges with an energy even passion heretofore unknown in the analytic interview literature Rudnytsky consistently emerges as a partner even an analytic

partner in dialogues that meld discovery with self discovery To be sure Psychoanalytic Conversations will find many clinical and scholarly readers among those who relish a good engrossing read But it will have special appeal to students of analysis who share Rudnytsky's belief that if psychoanalysis is to remain vital in the new century it can only be by expanding its horizons and learning from those who have taken it to task

The Empathic Civilization Jeremy Rifkin, 2009-12-31 One of the leading big picture thinkers of our day Utne Reader delivers his boldest work in this erudite tough minded and far reaching manifesto Never has the world seemed so completely united in the form of communication commerce and culture and so savagely torn apart in the form of war financial meltdown global warming and even the migration of diseases No matter how much we put our minds to the task of meeting the challenges of a rapidly globalizing world the human race seems to continually come up short unable to muster the collective mental resources to truly think globally and act locally In his most ambitious book to date bestselling social critic Jeremy Rifkin shows that this disconnect between our vision for the world and our ability to realize that vision lies in the current state of human consciousness The very way our brains are structured disposes us to a way of feeling thinking and acting in the world that is no longer entirely relevant to the new environments we have created for ourselves The human made environment is rapidly morphing into a

global space yet our existing modes of consciousness are structured for earlier eras of history which are just as quickly fading away Humanity Rifkin argues finds itself on the cusp of its greatest experiment to date refashioning human consciousness so that human beings can mutually live and flourish in the new globalizing society In essence this shift in consciousness is based upon reaching out to others But to resist this change in human relations and modes of thinking Rifkin contends would spell ineptness and disaster in facing the new challenges around us As the forces of globalization accelerate deepen and become ever more complex the older faith based and rational forms of consciousness are likely to become stressed and even dangerous as they attempt to navigate a world increasingly beyond their reach and control Indeed the emergence of this empathetic consciousness has implications for the future that will likely be as profound and far reaching as when Enlightenment philosophers upended faith based consciousness with the canon of reason

Instinct and Revelation Alondra Oubre, 2013-10-11 Instinct and Revelation revolves around the hypothesis that ritual behavior and imaginative awareness in early hominids may have helped to spawn the evolution of the human brain and human consciousness Using an integral perspective comparable with systems theory the book carefully interweaves fact and theory from physical and cultural anthropology psychobiology and the brain sciences psychology and to a lesser degree eastern philosophy This book breaks from tradition by discussing from a primarily anthropological perspective the origin of human consciousness within a philosophical framework that embraces precepts from human evolution evolutionary psychology the neurosciences biocultural anthropology and cultural symbolic anthropology

Attachment and Character Edward Harcourt,2021-10-14 There are many exciting points of contact between developmental psychology in the attachment paradigm and the kinds of questions first raised by Aristotle s ethics and which continue to preoccupy moral philosophers today The book brings experts from both fields together to explore them for the first time to demonstrate why philosophers working in moral psychology or in virtue ethics better the triangle of relationships between the concepts of human nature human excellence and the best life for human beings should take attachment theory more seriously than they have done to date Attachment theory is a theory of psychological development And the characteristics attachment theory is a developmental theory of the various subvarieties of attachment are evaluatively inflected to be securely attached to a parent is to have a kind of attachment that makes for a good intimate relationship But obviously the classification of human character in terms of the virtues is evaluatively inflected too So it would be strange if there were no story to be told about how these two sets of evaluatively inflected descriptions relate to one another Attachment and Character explores the relationship between attachment and prosocial behaviour probes the concept of the prosocial itself and the relationship between prosocial behaviour virtue and the quality of the social environment the question whether there even are such things as stable character traits and whether attachment theory in locating the origins of virtue in secure attachment and attachment dispositions in human evolutionary history gives support to ethical naturalism in any of the many meanings of that expression

Monstrous Kinships Jillmarie Murphy,2011-09-22 *Monstrous Kinships* Realism and Attachment Theory in the Novels of Mary Shelley Herman Melville Thomas Hardy Stephen Crane Theodore Dreiser and Vladimir Nabokov investigates the connection between realist fiction of the nineteenth and early twentieth centuries and the psychoanalytic approach of John Bowlby s Attachment Theory Attachment Theory arises from the guiding principles of realism and the veratist s devotion to long term direct observation of subject matter Additionally because Attachment Theory originated in the field of child psychoanalysis this book highlights the detrimental effects of parental obsession and abandonment industrialism poverty alcoholism religious addiction and physical emotional and sexual abuse on child characters The subject of *Monstrous Kinships* is timely as literary critics and theorists as well as creative writers continue to expand their range of inquiry to include the child as primary subject in various treatments of post colonial and transnational culture
