

Improving fisheries sustainability

State agencies often have less resources than federal agencies, and data limitations represent a critical challenge to fisheries management in the United States

Fisheries Management Index (FMI)

We applied the FMI as a tool to track and evaluate non-federal fisheries management performance, which can help managers prioritize fisheries for management attention

Prioritization → attention → solutions

Management prioritization and partnerships with fishing communities can boost resources and management capabilities, improve data collection, close critical information gaps, and ultimately produce healthier fisheries

60%

of fisheries surveyed are not actively managed

80%

of fisheries surveyed have unknown health status

The Management Of Marine Fisheries:

Handbook of Marine Fisheries Conservation and Management R. Quentin Grafton, Ray Hilborn, Dale Squires, Maree Tait, Meryl Williams, 2010-01-21 This handbook is the most comprehensive and interdisciplinary work on marine conservation and fisheries management ever compiled. It is the first to bridge fisheries and marine conservation issues. Its innovative ideas, detailed case studies, and governance framework provide a global special perspective over time and treat problems in the high seas, community fisheries, industrial fishing, and the many interactions between use and non-use of the oceans. Its policy tools and ideas for overcoming the perennial problems of overfishing, habitat, and biodiversity loss address the facts that many marine ecosystems are in decline and plagued by overexploitation due to unsustainable fishing practices. An outstanding feature of the book is the detailed case studies on conservation practice and fisheries management from around the world. These case studies are combined with foundation chapters that provide an overview of the state of the marine world and innovative and far-reaching perspectives about how we can move forward to face present and future challenges. The contributors include the world's leading fisheries scientists, economists, and managers. Ecosystem and incentive-based approaches are described and complemented by tools for cooperative participatory solutions. Unique themes treated: fisher behavior and incentives for management beyond rights-based approaches; a synthesis of proposed solutions; a framework for understanding and overcoming the critical determinants of the decline in fisheries; degradation of marine ecosystems and poor socio-economic performance of many fishing communities; models for innovative policy instruments; a plan of action and adoption pathways to promote sustainable fishing practices globally. Collectively, the handbook's many valuable contributions offer a way forward to both understanding and resolving the multifaceted problems facing the world's oceans.

Sustaining Marine Fisheries Committee on Ecosystem Management for Sustainable Marine Fisheries, Commission on Geosciences, Environment and Resources, Ocean Studies Board, Division on Earth and Life Studies, National Research Council, 1999-03-05 Fluctuations and declines in marine fish populations have caused growing concern among marine scientists, fisheries managers, commercial and recreational fishers, and the public. *Sustaining Marine Fisheries* explores the nature of marine ecosystems and the complex interacting factors that shape their productivity. The book documents the condition of marine fisheries today, highlighting species and geographic areas that are under particular stress. Challenges to achieving sustainability are discussed, and shortcomings of existing fisheries management and regulation are examined. The volume calls for fisheries management to adopt a broader ecosystem perspective that encompasses all relevant environmental and human influences. *Sustaining Marine Fisheries* offers new approaches to building workable fisheries management institutions, improving scientific data, and developing management tools. The book recommends ways to change current practices that encourage overexploitation of fish resources. It will be of special interest to marine policymakers and

the "Best Scientific Information Available" Standard in Fisheries Management National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Defining Best Scientific Information Available for Fisheries Management, 2004-09-03 Under the Magnuson Stevens Fisheries Conservation and Management Act FCMA managers are required to use the best scientific information available in the preparation of federal fishery management plans National Standard 2 in the FCMA However the Act provides no further guidance as to how conformance to this standard should be determined Because adherence to this standard has often been contentious Congress has considered adding a definition for what constitutes best scientific information available in the reauthorization of the FCMA This report examines both the current application and the controversy over the standard and concludes that a legislative definition would be too inflexible to accommodate regional differences and future advances in science and technology Instead the report recommends that NOAA Fisheries adopt procedural guidelines to ensure that the scientific information used in the development of fishery management plans is relevant and timely and is the product of processes characterized by inclusiveness transparency and openness timeliness and peer review *Ecosystem Based Management for Marine Fisheries* Andrea Belgrano, Charles W. Fowler, 2011-02-03 Showing how big picture patterns can help overcome the failures of conventional management this book is ideal for students researchers and professionals involved with marine fisheries It explores not only the current practice of the ecosystem approach to fisheries management but also its critical importance to even larger perspectives The first section gives a valuable overview of how more and more of the complexity of real world systems is being recognized and involved in the management of fisheries around the world The second section then demonstrates how important aspects of real world systems involving population dynamics evolution and behavior remain to be taken into account completely This section also shows how we must change the way we think about our involvement in and the complexity of marine ecosystems The final chapters consider how with the use of carefully chosen macroecological patterns we can take important steps towards more holistic management of marine fisheries *National Plan for Marine Fisheries* United States.
