Quantum Field Theory and String Theory L. Baulieu, Vladimir Dotsenko, Vladimir Kazakov, Paul Windey, 2012-12-06 The Cargese Workshop Quantum Field Theory and String Theory was held from May 10 to May 21 1993 The broad spectrum of the work presented at the Workshop was the reflection of a time of intensive search for new ways of solving some of the most fundamental problems in string theory quantum gravity and non perturbative field theory A number of talks indicated the emergence of new promising domains of investigation It is this very diversity of topics which in our opinion represents one of the most attractive features of the present volume which we hope will provide a good orientation in the abundant flow of ideas and publications in modern quantum field theory Many contributions to the present proceedings are concerned with two dimensional quantum field theory The continuous advances in the domain of two dimensional integrable theories on the lattice as well as in the continuum including conformal field theories Liouville field theory and matrix models of two dimensional quantum gravity are very well represented Other papers address physically realistic and therefore very complicated problems like developed turbulence the Hofstadter problem higher dimensional gravity and phenomenological strings A new elegant class of

topological field theories is presented New ideas in the string representation of multicolor quantum chromo dynamics were widely discussed at the Workshop more particularly the example of the exactly solvable two dimensional case The Formation and Evolution of Cosmic Strings G.
