Strong Metal Support Interactions Acs Symposium Series 298:

Model Systems in Catalysis Robert Rioux, 2009-11-11 This book is an excellent compilation of cutting edge research in heterogeneous catalysis and related disciplines surface science organometallic catalysis and enzymatic catalysis In 23 chapters by noted experts the volume demonstrates varied approaches using model systems and their successes in understanding aspects of heterogeneous catalysis both metal and metal oxide based catalysis in extended single crystal and nanostructured catalytic materials To truly appreciate the astounding advances of modern heterogeneous catalysis let us first consider the subject from a historical perspective Heterogeneous catalysis had its beginnings in England and France with the work of scientists such as Humphrey Davy 1778 1829 Michael Faraday 1791 1867 and Paul Sabatier 1854 1941 Sabatier postulated that surface compounds similar to those familiar in bulk to chemists were the intermediate species leading to catalytic products Sabatier proposed for example that NiH moieties on a Ni surface were able to hydrogenate ethylene whereas NiH was not In the USA Irving Langmuir concluded just the opposite namely that chemisorbed surface species are chemically bound to surfaces and are unlike known molecules These chemisorbed species were the active participants in catalysis The equilibrium between gas phase molecules and adsorbed chemisorbed species yielding an adsorption isotherm produced a monolayer by simple site filling kinetics

Sustainable Chemistry Michael North, 2016 Focussing on catalysis through non endangered metals this book is an important reference for researchers working in catalysis and green chemistry

Metal-Catalysed Reactions of Hydrocarbons Geoffrey C. Bond, 2006-10-03 This unique book drawing on the author's lifetime experience critically evaluates the extensive literature on the field of Metal Catalysed Reactions of Hydrocarbons Emphasis is placed on reaction mechanisms involving hydrogenation hydrogenolysis skeletal and positional isomerisation and exchange reactions The motivation for fundamental research in heterogeneous catalysis is to identify the physicochemical characteristics of active centres for the reaction being studied to learn how these may be modified or manipulated to improve the desired behavior of the catalyst and to recognize and control those aspects of the catalyst's structure that limit its overall performance By restricting the subject of the book to hydrocarbons Bond has progressively developed the subject matter to include areas of importance both to researchers and to those working in the industry

Hydrogen Effects in Catalysis Zoltan Paal, P.G. Menon, 2020-09-11 This book covers hydrogen effects in catalysis in the broadest sense from surface science to industrial applications It draws the attention of the catalysis community to the importance of the phenomena of hydrogen effects both in the science and technology of catalysis

Advances in Electron Transfer Chemistry

Patrick S. Mariano, 2013-10-22 Advances in Electron Transfer Chemistry Volume 3 presents studies that discuss findings in

the various aspects of electron chemistry The book is comprised of four chapters each chapter reviews a work that tackles an issue in electron transfer chemistry Chapter 1 discusses the photoinduced electron transfer in flexible biaryl donor acceptor molecules Chapter 2 tackles light induced electron transfer in inorganic systems in homogeneous and heterogeneous phases The book also covers internal geometry relaxation effects on electron transfer rates of amino centered systems The sequential electron transfer reactions catalyzed by cytochrome p 450 enzymes are also dealt with The text will be of great use to researchers interested in the field of electron transfer chemistry
