This report provides guidance to structural engineers in the design of civil structures to resist the effects of terrorist bombings As dramatized by the bombings of the World Trade Center in New York City and the Murrah Building in Oklahoma City civil engineers today need guidance on designing structures to resist hostile acts The U S military services and foreign embassy facilities developed requirements for their unique needs but these the documents are restricted Thus no widely available document exists to provide engineers with the technical data necessary to design civil structures for enhanced physical security The unrestricted government information included in this report is assembled collectively for the first time and rephrased for application to civilian facilities Topics include determination of the threat methods by which structural loadings are derived for the determined threat the behavior and selection of structural systems the design of structural components the design of security doors the design of utility openings and the retrofitting of existing structures This report transfers this technology to the civil sector and provides complete methods guidance and references for structural engineers challenged with a physical security problem

Modern Protective Structures Theodor Krauthammer, 2008-02-01 In today's world reasonably predictable military operations have been replaced by low intensity conflicts less predictable terrorist activities carried out by determined individuals or small groups that possess a wide range of backgrounds and capabilities Because of the threats posed by this evolving type of warfare civil engineers and emergency personnel face new challenges in designing facilities to protect lives and property and in conducting effective rescue operations and forensic investigations Addressing these needs Modern Protective Structures develops realistic guidelines for the analysis design assessment retrofit and research of protected facilities After introducing a comprehensive risk management approach the author provides a general background on explosive devices and their capabilities as well as explosive effects and the processes that generate them He then discusses the effects of conventional and nuclear explosions The book subsequently considers the significant design differences between conventional and nuclear loads and between existing design procedures and state of the art information from recent research It also summarizes existing blast resistant design approaches and describes the dynamic responses of structural systems to blasts shocks and impacts Additional coverage includes the behavior of specific structural connections the traditional concept of P I diagrams and progressive collapse The book concludes with a systematic and balanced protective design approach Tackling the analytical design assessment and hazard mitigation issues associated with short duration dynamic loads this book examines how impulsive loads affect various types of buildings and facilities It provides the necessary material to help ensure the safety of persons assets and projects **Manuals Combined: DoD Security**
