Structural Design Of Tall Concrete Mas:

Design and Construction of Large-panel Concrete Structures Portland Cement Association, 1975 **Tall buildings** fib Fédération internationale du béton, 2014-08-01 fib Bulletin 73 Tall Buildings is the result of a collaboration between the fib and MPA The Concrete Centre UK Task Group 1 6 High rise buildings within fib Commission 1 Structures was drawn together with a mandate to write about the experience and know how pertinent to the development design and construction of tall concrete buildings The group s findings are presented in this state of the art report Tall buildings are a unique challenge to engineers even to those with extensive experience of low rise structures The bulletin explains the critical interfaces with other professionals for example architects building services engineers fa ade and lift specialists geotechnical engineers and wind specialists highlighting how these parties interact with engineers and can influence and guide the development of the structural solution The key factors in choosing the most appropriate structural system are discussed The bulletin covers the criteria used to select the most economical structural elements including the foundations the vertical elements and the floor slabs Examples of common construction methods are presented and their effects on the structural engineering design are discussed Tall buildings can undergo significant deformation during their construction and service life These movements need to be understood by the designer and potentially compensated for in the design and during construction One of the main particularities of the design of tall buildings is the dominance of the lateral loading from wind and seismic actions The bulletin provides a discussion of these important topics and sets out the current approach taken by experienced engineers Designers of tall buildings also need to understand the dynamic behaviour of the structure and confine the motion of the building to within acceptable limits Approaches to damping and dynamic performance are discussed and guidance provided on the appropriate occupant comfort limits **Planning and Design of Tall Buildings:**

Structural design of tall concrete & masonry buildings , 1972 4th fib International Conference on Concrete Sustainability (ICCS2024) Joaquim A. O. Barros, Vítor M. C. F. Cunha, Hélder S. Sousa, José C. Matos, José M. Sena-Cruz, 2024-12-28 This volume presents the proceedings of the fib International Conference on Concrete Sustainability held in Guimarães Portugal on 11-13 September 2024 It covers topics such as concrete and advanced materials structural performance and design construction methods and management durability life cycle design through life management and care resilience dismantlement reuse and recycling innovation in buildings and civil structure fib The International Federation for Structural Concrete is a not for profit association whose mission is to develop at an international level the study of scientific and practical matters capable of advancing the technical economic aesthetic and environmental performance of concrete construction **Outrigger Design for High-Rise Buildings** Hi Sun Choi, Goman Ho, Leonard Joseph, Neville Mathias, Ctuh, 2017-09-19 Outrigger systems are rigid horizontal structures designed to improve a building s stability and strength by connecting the building core or spine to distant columns much in the way an outrigger can prevent a canoe from

overturning Outriggers have been used in tall narrow buildings for nearly 500 years but the basic design principle dates back centuries In the 1980s as buildings grew taller and more ambitious outrigger systems eclipsed tubular frames as the most popular structural approach for supertall buildings Designers embraced properly proportioned core and outrigger schemes as a method to offer far more perimeter flexibility and openness for tall buildings than the perimeter moment or braced frames and bundled tubes that preceded them However the outrigger system is not listed as a seismic lateral load resisting system in any code and design parameters are not available despite the increasingly frequent use of the concept The Council on Tall Buildings and Urban Habitat s Outrigger Working Group has addressed the pressing need for design guidelines for outrigger systems with this guide a comprehensive overview of the use of outriggers in skyscrapers This guide offers detailed recommendations for analysis of outriggers within the lateral load resisting systems of tall buildings for recognizing and addressing effects on building behavior and for practical design solutions It also highlights concerns specific to the outrigger structural system such as differential column shortening and construction sequence impacts Several project examples are explored in depth illustrating the role of outrigger systems in tall building designs and providing ideas for future projects The guide details the impact of outrigger systems on tall building designs and demonstrates ways in which the technology is continuously advancing to improve the efficiency and stability of tall buildings around the world

Microcomputer Knowledge-based Expert Systems in Civil Engineering Hojjat Adeli, 1988 Proceedings of a symposium at the ASCE National Convention held in Nashville Tennessee May 10 11 1988 Sponsored by the Structural Division of ASCE This collection contains 16 papers presenting applications of expert system technology to civil engineering problems with emphasis on microcomputer implementations Papers are divided into four categories structural engineering geotechnical and environmental engineering construction and general Topics include knowledge acquisition and machine learning using PROLOG on a Macintosh an environment for building integrated structural design expert systems an integrated rule based system for industrial building design and integrating an expert system shell with spreadsheet programs Expert systems for hazardous waste management diagnosis and treatment of dam seepage problems and analysis of activated sludge are presented Also covered are knowledge elicitation techniques for construction scheduling an expert system for construction contract claims and knowledge acquisition for a contractor prequalification knowledge based system Finally logic programming to manage constraint based design and development of an earthquake insurance and investment risk analysis system are discussed
