

What decides the properties of a polymer?

- Stronger attractive forces between chains = stronger, less flexible polymer.
- Chains able to slide past each other = flexible polymer .
- In poly(ethene) attractive forces are weak instantaneous dipole - induced dipole, will it be flexible or not?
- Nylon has strong hydrogen bonds, why does this make it a strong fibre?

Structure And Properties Of Polymers

Gottfried W. Ehrenstein

Structure And Properties Of Polymers:

Polymeric Materials Gottfried W. Ehrenstein, 2001-01-01 This book is intended to fill the knowledge gap between the chemical structure and the related physical characteristics of plastics necessary for appropriate material selection design and processing The entire spectrum of plastics is addressed including thermoplastics thermosets elastomers and blends It also contains an in depth presentation of the structure property relationships of a wide range of plastics One of the special features is the extensive discussion and explanation of the impact of relationships on processing and vice versa the effect of processing on structure and properties The book contains several application oriented examples and is presented at an intermediate level for both practicing plastic engineers and advanced engineering students **Polymers** Carole A.

Daniels, 1989-11-20 A concise illustrated presentation of polymer structure and bonding The well constructed organization and index make the book readily usable as a reference book Those who read the entire text will be well rewarded with a solid understanding of the fundamentals of polymer properties and possible applications This book will most certainly remain a valuable reference for years to come Polymer Structure, Properties, and Applications Rudolph D. Deanin, 1972

Structure and Properties of Polymers Akihiro Abe, Ann-Christine Albertsson, Karel Dusek, Jan Genzer, Shiro Kobayashi, Kwang-Sup Lee, Ludwik Leibler, Timothy E. Long, Ian Manners, Martin Möller, Eugene M. Terentjev, Maria J. Vicent, Brigitte Voit, Ulrich Wiesner, 2007-08-23 **Structure and Properties of Oriented Polymers** Ian M. Ward, 2012-12-06 The first edition was produced at a time when the advantages of studying oriented polymers were just becoming apparent From a scientific stand point it had been demonstrated that greater insight into both structure and properties could be obtained if an oriented polymer was prepared From a technological viewpoint major advances were under way especially in high modulus and high strength fibres Twenty years later it is possible to review the scientific advances which have been made in this area and to provide much wider perspectives for the technology As in the case of the first edition the emphasis is on the methodologies available for characterizing oriented polymers and their mechanical behaviour It is a particular pleasure to thank the contributing authors for their cooperation and Dr Philip Hastings of Chapman Hall for his support and encouragement I am also indebted to Professors A H Windle and D C Bassett for their respective contributions to sections 1 3 1 and 1 3 4 Although this chapter has been extensively revised the contribution of the late Leslie Holliday to the first edition of this book is also acknowledged Introduction 1 I M Ward 1 1 THE PHENOMENON OF ORIENTATION Orientation in polymers is a phenomenon of great technical and theoretical importance The word orientation itself conveys a number of ideas *Process-Structure-Properties in Polymer Additive Manufacturing* Swee Leong Sing, Wai Yee Yeong, 2021-09-01 Additive manufacturing AM methods have grown and evolved rapidly in recent years AM for polymers is an exciting field and has great potential in transformative and translational research in many fields such as biomedical aerospace and even electronics Current methods for polymer AM include material extrusion material jetting

vat polymerisation and powder bed fusion With the promise of more applications detailed understanding of AM from the processability of the feedstock to the relationship between the process structure properties of AM parts has become more critical More research work is needed in material development to widen the choice of materials for polymer additive manufacturing Modelling and simulations of the process will allow the prediction of microstructures and mechanical properties of the fabricated parts while complementing the understanding of the physical phenomena that occurs during the AM processes In this book state of the art reviews and current research are collated which focus on the process structure properties relationships in polymer additive manufacturing Processing-Structure-Properties Relationships in Polymers Roberto Pantani, 2019-12-05 This collection of research and review papers is aimed at depicting the state of the art on the possible correlations between processing variables obtained structure and special properties which this structure induces on the plastic part The extraordinary capacity of plastics to modify their properties according to a particular structure is evidenced for several transformation processes and for many applications The final common goal is to take profit of this peculiar capacity of plastics by inducing through a suitable processing a specific spatial organization *Structure and Properties of Crosslinked Polymers* Gasan M Magomedov, 2011-03-23 This book gives a fresh point of view on the curing processes structure and properties of crosslinked polymers The general view is that the structure and properties of crosslinked polymers are defined by their density this book demonstrates that the parameters are defined by the supermolecular a more precisely supersegmental structure of the crosslinked polymers The quantitative relationships of the structures properties are obtained for these polymers Using an epoxy polymer as a nanofiller for a nanocomposite is discussed and a new class of polymer is proposed The introduction of the nanofiller gives variation in the mechanical properties degree of crystallinity gas permeability and so on The use of these crosslinked polymers as natural nanocomposites is proposed Practical methods of crosslinked polymer s supersegmental structure regulation are considered and all the changes that this gives their properties are detailed This book will be of significance to all material scientists and students of material science **Structure—Property Relationships in Polymers** Charles E. Carraher Jr., R.B. Seymour, 2012-12-06 The first concern of scientists who are interested in synthetic polymers has always been and still is How are they synthesized But right after this comes the question What have I made and for what is it good This leads to the important topic of the structure property relations to which this book is devoted Polymers are very large and very complicated systems their characterization has to begin with the chemical composition configuration and conformation of the individual molecule The first chapter is devoted to this broad objective The immediate physical consequences discussed in the second chapter form the basis for the physical nature of polymers the supermolecular interactions and arrangements of the individual macromolecules The third chapter deals with the important question How are these chemical and physical structures experimentally determined The existing methods for polymer characterization are enumerated and discussed in

this chapter The following chapters go into more detail For most applications textiles films molded or extruded objects of all kinds the mechanical and the thermal behaviors of polymers are of pre ponderant importance followed by optical and electric properties Chapters 4 through 9 describe how such properties are rooted in and dependent on the chemical structure More detailed considerations are given to certain particularly important and critical properties such as the solubility and permeability of polymeric systems Macromolecules are not always the final goal of the chemist they may act as intermediates reactants or catalysts This topic is presented in Chapters 10 and 11 Properties and Structure of Polymers Arthur Victor Tobolsky,1960
