Neural Smithing Russell Reed, Robert J Marks, II, 1999-02-17 Artificial neural networks are nonlinear mapping systems whose structure is loosely based on principles observed in the nervous systems of humans and animals The basic idea is that massive systems of simple units linked together in appropriate ways can generate many complex and interesting behaviors This book focuses on the subset of feedforward artificial neural networks called multilayer perceptrons MLP These are the mostly widely used neural networks with applications as diverse as finance forecasting manufacturing process control and science speech and image recognition This book presents an extensive and practical overview of almost every aspect of MLP methodology progressing from an initial discussion of what MLPs are and how they might be used to an in depth examination of technical factors affecting performance The book can be used as a tool kit by readers interested in applying networks to specific problems yet it also presents theory and references outlining the last ten years of MLP research **Complexity Theory and Cryptology** Jörg Rothe, 2005-07-22 Modern cryptology increasingly employs mathematically rigorous concepts and methods from complexity theory Conversely current research topics in complexity theory are often motivated by questions and problems from cryptology This book takes account of this situation and therefore its subject is what may be dubbed cryptocomplexity a kind of symbiosis of these two areas This book is written for undergraduate and graduate students of computer science mathematics and engineering and can be used for courses on complexity theory and cryptology

preferably by stressing their interrelation Moreover it may serve as a valuable source for researchers teachers and practitioners working in these fields Starting from scratch it works its way to the frontiers of current research in these fields and provides a detailed overview of their history and their current research topics and challenges **Structure in**

Complexity Theory, 2002 *Current Trends In Theoretical Computer Science - Entering The 21st Century* Gheorghe Paun,Grzegorz Rozenberg,Arto Salomaa,2001-02-12 The scientific developments at the end of the past millennium were dominated by the huge increase and diversity of disciplines with the common label computer science The theoretical foundations of such disciplines have become known as theoretical computer science This book highlights some key issues of theoretical computer science as they seem to us now at the beginning of the new millennium The text is based on columns and tutorials published in the Bulletin of the European Association for Theoretical Computer Science in the period 1995 2000 The columnists themselves selected the material they wanted for the book and the editors had a chance to update their work Indeed much of the material presented here appears in a form quite different from the original Since the presentation of most of the articles is reader friendly and does not presuppose much knowledge of the area the book constitutes suitable supplementary reading material for various courses in computer science Secure Multiparty Computation and Secret Sharing Ronald Cramer,Ivan Bjerre Damgård,Jesper Buus Nielsen,2015-07-15 In a data driven society individuals and companies encounter numerous situations where private information is an important resource How can parties handle confidential data if they do not trust everyone involved This text is the first to present a comprehensive treatment of unconditionally secure techniques for multiparty computation MPC and secret sharing In a secure MPC each party possesses some private data while secret sharing provides a way for one party to spread information on a secret such that all parties together hold full information yet no single party has all the information The authors present basic feasibility results from the last 30 years generalizations to arbitrary access structures using linear secret sharing some recent techniques for efficiency improvements and a general treatment of the theory of secret sharing focusing on asymptotic results with interesting applications related to MPC
