Structure Of Biopolymers:

The Structure of Biopolymers Oswald L. Hörer, 1973 **Biopolymers** Jeyaseelan Aravind, Murugesan Kamaraj, 2023-07-24 Sustainable and green eco friendly remediation technologies to tackle environmental issues are currently being developed This book covers advancements and achievements in the application of tailored biopolymers for green environmental pollution remediation technologies It covers plant based and animal sourced biopolymers composites and biopolymer based membrane technology This book covers all the chapters in the form of a review which gives a comprehensive outlook on each of the topics covered in the chapters thus quite useful for graduates researchers and academicians **Principles of Nucleic Acid Structure** Wolfram Saenger, 2013-12-01 New textbooks at all levels of chemistry appear with great regularity Some fields like basic biochemistry organic reaction mechanisms and chemical thermodynamics are well represented by many excellent texts and new or revised editions are published sufficiently often to keep up with progress in research However some areas of chemistry especially many of those taught at the graduate level suffer from a real lack of up to date textbooks The most serious needs occur in fields that are rapidly changing Textbooks in these subjects usually have to be written by scientists actually involved in the research which is advancing the field It is not often easy to persuade such individuals to set time aside to help spread the knowledge they have accumulated Our goal in this series is to pinpoint areas of chemistry where recent progress has outpaced what is covered in any available textbooks and then seek out and persuade experts in these fields to produce relatively concise but instructive introductions to their fields These should serve the needs of one semester or one quarter graduate courses in chemistry and biochemistry In some cases the availability of texts in active research areas should help stimulate the creation of new courses CHARLES R CANTOR New York Preface This monograph is based on a review on polynucleotide structures written for a book series in 1976

Structure and Dynamics of Nucleic Acids, Proteins, and Membranes E. Clementi, S. Chin, 2012-12-06 This volume collects a number of the invited lectures and a few selected contributions presented at the International Symposium on Structure and Dynamics of Nucleic Acids Proteins and Membranes held August 31st through September 5th 1986 in Riva del Garda Italy The title of the conference as well as a number of the topics covered represent a continuation of two previous conferences the first held in 1982 at the University of California in San Diego and the second in 1984 in Rome at the Accademia dei Lincei These two earlier conferences have been documented in Structure and Dynamics Nucleic Acids and Proteins edited by E Clementi and R H Sarma Adenine Press New York 1983 and Structure and Motion Membranes Nucleic Acids and Proteins edited by E Clementi G Corongiu M H Sarma and R H Sarma Adenine Press New York 1985 At this conference in Riva del Garda we were very hesitant to keep the name of the conference the same as the two previous ones Indeed a number of topics discussed in this conference were not included in the previous ones and even the emphasis of this gathering is only partly reflected in the conference title An alternative title would have been Structure and Dynamics of Nucleic Acids Proteins and Higher Functions or possibly higher components rather than higher functions

Research Trends Tamás S. Németh, 2007 Biopolymers are a special class of polymers produced by living organisms Starch proteins and peptides DNA and RNA are all examples of biopolymers in which the monomer units respectively are sugars amino acids and nucleic acids A major but defining difference between polymers and biopolymers can be found in their structures Polymers including biopolymers are made of repetitive units called monomers Biopolymers inherently have a well defined structure The exact chemical composition and the sequence in which these units are arranged is called the primary structure Many biopolymers spontaneously fold into characteristic compact shapes see also protein folding as well as secondary structure and tertiary structure which determine their biological functions and depend in a complicated way on their primary structures Structural biology is the study of the structural properties of the biopolymers In contrast most synthetic polymers have much simpler and more random or statistic structures This book presents leading edge research from around the world in this dynamic field
