

Chapter 1: INTRODUCTION TO MANAGEMENT SCIENCE

Introduction

Management science is applying a scientific approach to problem-solving management to help managers make better choices. As suggested by this concept, management science includes a variety of mathematically based strategies that have either been developed within the area of management science or adopted from other disciplines such as mathematics, natural sciences, statistics, and engineering. This module offers an introduction to the methods that make up the philosophy of management and explains their contributions to crisis management.

Management science is a proven and recognized discipline in industry. Management science techniques implementations are common, and they have also been credited with growing the company firms' performance and profitability. Several suggest that they use management science methods in different organization surveys, and the majority consider the findings to be quite good. Management science (also referred to as operations research, systematic processes, predictive study and decision-making sciences) is part of the core curriculum in most business programs.

After studying this module, you should be able to:

1. Define management science and describe its importance in business.
2. Explain the major characteristics of management science and how it is applied in problem solving.
3. Explain the importance of models in decision making process.
4. Explain and identify the appropriate management science technique in managerial problems.

1.1 Definition and Characteristics of Management Science

Definition

Management science can be defined briefly as applying the scientific method to the analysis and solution of problems with managerial decision. According to Turban and Meridith, management science is applying analytical principles, procedures, and instruments to problems concerning device processes in order to offer optimal answers to the problems for those in charge of the processes.

Major Characteristics of Management Science

1. A main focus on decision making by the managers.
2. Usage of the analytical model to the decision-making phase.
3. Examining the condition of the judgment from a specific viewpoint
4. Using methods and expertise from multiple disciplines.
5. A dependency on the mathematical models of shape.
6. Computer widespread use.

Decision-making is a method of deciding between two or more possible courses of action necessary to accomplish a particular goal. Decision-making is a systematic process and can be described simply by defining the problem, searching for alternative courses of action, evaluating alternatives and choosing one alternative.

System configuration comprises of three associated components: inputs, procedures, and outputs. The inputs (people, raw materials, money) enter the system. Processes transform inputs into outputs (processes may use resources, operating procedures, workers, machines). Outputs exit the machine (Products, Customers served). Systems approach involves finding and defining all the elements mentioned and the real world relationships between them. This method is the
