innovations and emerging technologies to support teaching and learning has been an important research area in the field of education around the world. In science, STEM education technologies can be leveraged to present and visualize scientific theories and concepts effectively while the development of pedagogic innovations usually requires collective interdisciplinary research efforts. In addition, emerging technologies can better support teachers to assess students' learning performance in STEM subjects and offer students viable virtual environments to facilitate laboratory-based learning, thereby contributing to sustainable development in both K-12 and higher education.

Future Science Opportunities in Antarctica and the Southern Ocean National Research Council, Division on Earth and Life Studies, Polar Research Board, Committee on Future Science Opportunities in Antarctica and the Southern Ocean, 2011-11-28. Antarctica and the surrounding Southern Ocean remains one of the world's last frontiers. Covering nearly 14 million km², an area approximately 1.4 times the size of the United States, Antarctica is the coldest, driest, highest, and windiest continent on Earth. While it is challenging to live and work in this extreme environment, this region offers many opportunities for scientific research. Ever since the first humans set foot on Antarctica a little more than a century ago, the discoveries made there have advanced our scientific knowledge of the region, the world, and the Universe, but there is still much more to learn. However, conducting scientific research in the harsh environmental conditions of Antarctica is profoundly challenging. Substantial resources are needed to establish and maintain the infrastructure needed to provide heat, light, transportation, and drinking water while at the same time minimizing pollution of the environment and ensuring the safety of researchers. *Future Science Opportunities in Antarctica and the Southern Ocean* suggests actions for the United States to achieve success for the next generation of Antarctic and Southern Ocean science. The report highlights important areas of research by encapsulating each into a single overarching question. The questions fall into two broad themes: 1) those related to global change and 2) those related to fundamental discoveries. In addition, the report identified key science questions that will drive research in Antarctica and the Southern Ocean in coming decades and highlighted opportunities to be leveraged to sustain and improve the U.S. research efforts in the region.

Girls in Science Leisl Chatman, 2008. *Girls in Science* is valuable for more than issues of gender equity. As their work progressed, the authors realized what they were learning could be adapted to help with equitable teaching for other groups of students: special needs, English language learners, and ethnic and racial minorities, for example.

Basic Research Opportunities in Earth Science National Research Council, Commission on Geosciences, Environment, and Resources, Board on Earth Sciences and Resources, Committee on Basic Research Opportunities in the Earth Sciences, 2001-02-01. Basic Research Opportunities in Earth Science identifies areas of high priority research within the purview of the Earth Science Division of the National Science Foundation, assesses cross-disciplinary connections, and discusses the linkages between basic research and societal needs. Opportunities in Earth science have been opened up by major improvements in techniques for reading the geological record of terrestrial change, capabilities for observing active processes in the present-day Earth, and computational

technologies for realistic simulations of dynamic geosystems This book examines six specific areas in which the opportunities for basic research are especially compelling including integrative studies of the near surface environment the Critical Zone geobiology Earth and planetary materials investigations of the continents studies of Earth s deep interior and planetary science It concludes with a discussion of mechanisms for exploiting these research opportunities including EarthScope natural laboratories and partnerships

Science Teachers' Learning National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Teacher Advisory Council, Board on Science Education, Committee on Strengthening Science Education through a Teacher Learning Continuum, 2016-01-15

Currently many states are adopting the Next Generation Science Standards NGSS or are revising their own state standards in ways that reflect the NGSS For students and schools the implementation of any science standards rests with teachers For those teachers an evolving understanding about how best to teach science represents a significant transition in the way science is currently taught in most classrooms and it will require most science teachers to change how they teach That change will require learning opportunities for teachers that reinforce and expand their knowledge of the major ideas and concepts in science their familiarity with a range of instructional strategies and the skills to implement those strategies in the classroom Providing these kinds of learning opportunities in turn will require profound changes to current approaches to supporting teachers learning across their careers from their initial training to continuing professional development A teacher s capability to improve students scientific understanding is heavily influenced by the school and district in which they work the community in which the school is located and the larger professional communities to which they belong *Science Teachers Learning* provides guidance for schools and districts on how best to support teachers learning and how to implement successful programs for professional development This report makes actionable recommendations for science teachers learning that take a broad view of what is known about science education how and when teachers learn and education policies that directly and indirectly shape what teachers are able to learn and teach The challenge of developing the expertise teachers need to implement the NGSS presents an opportunity to rethink professional learning for science teachers *Science Teachers Learning* will be a valuable resource for classrooms departments schools districts and professional organizations as they move to new ways to teach science

Linking Competence to Opportunities to Learn Xiufeng Liu, 2009-05-01

For many people a high standard for student learning is desirable This is what underlies current standard based science education reforms around the world As someone who was born and brought up in a less privileged home and educated in a resource limited school environment in a developing country I always had to study hard to meet various standards from elementary to high school to university My first book in English published over 10 years ago Liu X 1996 *Mathematics and Science Curriculum Change in the People s Republic of China* Lewiston NY The Edwin Mellen Press provided me an opportunity to examine standards i e Chinese national science teaching syllabi from a historical and political

point of view I argued that standards are developed for particular political agendas in order to maintain the privileged position of certain groups i.e. urban residents in a society at expenses of others i.e. rural residents. Thus underneath standards is systematic discrimination and injustice. Since then I have had opportunities to study the issue of standards in much more breadth and depth. This book *Linking Competence to Opportunities to Learn: Models of Competence and data mining* provides me an opportunity to examine standards from a different perspective, opportunity to learn.
