Small,2013-06-17 We are in the midst of a digital revolution until recently the majority of appliances used in everyday life have been developed with analogue technology Now either at home or out and about we are surrounded by digital technology such as digital film audio systems computers and telephones From the late 1940s until the 1970s analogue technology was a genuine alternative to digital and the two competing technologies ran parallel with each other During this period a community of engineers scientists academics and businessmen continued to develop and promote the analogue computer At the height of the Cold War this community and its technology met with considerable success in meeting the urgent demand for high speed computing for use in the design and simulation of rockets aircraft and manned space vehicles The Analogue Alternative tracks the development commercialisation and ultimate decline of the electronic analogue computer in the USA and Britain It examines the roles played by technical economic and cultural factors in the competition between the alternative technologies but more importantly James Small demonstrates that non technical factors such as the role of military enterprise and the working practices of analogue engineers have been the most crucial in analogue s demise l This book will be of interest to students of the history and sociology of science and technology particularly computing It will also be relevant to those interested in technical change and innovation and the study of scientific cultures

Comprehensive Directory Containing Vendors Hardware Software **Philosophy and Technology II** Carl Mitcham,Alois Huning,1986-03-31 Until recently the philosophy and history of science proceeded in a separate way from the philosophy and history of technology and indeed with respect to both science and technology philosophical and historical inquiries were also following their separate ways Now we see in the past quarter century how the philosophy of science has been profoundly influenced by historical studies of the sciences and no longer concerned so single mindedly with the analysis of theory and explanation with the relation between hypotheses and experimental observation Now also we see the traditional historical studies of technology supplemented by philosophical questions and no longer so plainly focussed upon contexts of application on invention and practical engineering and on the mutually stimulating relations between technology and society Further alas the neat division of intellectual labor those clearly drawn distinctions between science and technology between the theoretical and the applied between discovery and justification between internalist and externalist approaches all have become muddled Partly this is due to internal revolutions within the philosophy and history of science the first result being recognition of their mutual relevance Partly however this state of muddle is due to external factors science at the least in the last half century has become so intimately connected with technology and technological developments have created so many new fields of scientific and philosophical inquiry that any critical reflection on scientific and technological endeavors must henceforth take their interaction into account *A Bibliographic Guide to the History of Computing, Computers, and the Information Processing Industry* ,1990-05-21 As millions of people have been exposed to computing through the tremendous growth of microcomputers there has developed an increasing appreciation of the history of data processing which dates back

many decades before the arrival of the computer Stretching back to at least the 1860s such early technologies as adding machines punch cards and the office appliance industry are now being recognized for their place in the history of the information processing industry This work brings together a comprehensive list of sources that offer a general introduction to the literature of the industry Divided into nine chapters covering topics and historical periods the bibliography provides an annotated list of published materials describing both the history of the industry and significant items of general interest Each chapter is introduced with a short review of historically important issues and comments on the literature and contains contemporary publications as well as more recent material To give the work a continuing usefulness ongoing publications such as computer magazines are highlighted Entries are grouped under nearly 100 subheadings covering such material as contemporary descriptions of hardware and software of the past seminal technical papers industry surveys programming languages significant individuals and companies and the role of Japan and microcomputing All citations are annotated with a brief summary of either the work s contents or its historical importance while two indexes provide both subject references and author citations This bibliography will be an important reference source for courses in the history of data processing and business history and a useful addition to public college and university libraries Hacking Europe Gerard Alberts, Ruth Oldenziel, 2014-09-03 Hacking Europe traces the user practices of chopping games in Warsaw hacking software in Athens creating chaos in Hamburg producing demos in Turku and partying with computing in Zagreb and Amsterdam Focusing on several European countries at the end of the Cold War the book shows the digital development was not an exclusively American affair Local hacker communities appropriated the computer and forged new cultures around it like the hackers in Yugoslavia Poland and Finland who showed off their tricks and creating distinct demoscenes Together the essays reflect a diverse palette of cultural practices by which European users domesticated computer technologies Each chapter explores the mediating actors instrumental in introducing and spreading the cultures of computing around Europe More generally the ludological element the role of mischief humor and play discussed here as crucial for analysis of hacker culture opens new vistas for the study of the history of technology **Reflections on the History of Computing** Arthur Tatnall, 2012-11-28 This book is a collection of refereed invited papers on the history of computing from the 1940s to the 1990s with one paper going back to look at Italian calculating computing machines from the first century to the 20th century The 22 papers cover a wide range of computing related topics such as specific early computer systems their construction their use and their users software programming and operating systems people involved in the theory design and use of these computers computer education and conservation of computing technology Many of the authors were actually involved in the events they describe and share their specific reflections on the history of computing **Computer Education for Teachers** Vicki F. Resources in education ,1991 **Now the Chips Are Down** Alison Gazzard,2024-05-21 The story of a pioneering microcomputer its beginnings as part of a national Computer Literacy Project its innovative hardware and its creative uses In 1982 the British Broadcasting Corporation launched its Computer Literacy Project intended to introduce interested adults to the world of computers and computing The BBC accompanied this initiative with television programs courses books and software an early experiment in multi platform education The BBC along with Acorn Computers also introduced the BBC Microcomputer which would be at the forefront of the campaign The BBC Micro was designed to meet the needs of users in homes and schools to demystify computing and to counter the general pessimism among the media in Britain about technology In this book Alison Gazzard looks at the BBC Micro examining the early capabilities of multi platform content generation and consumption and the multiple literacies this approach enabled not only in programming and software creation but also in accessing information across a range of media and in do it yourself computing She links many of these early developments to current new media practices Gazzard looks at games developed for the BBC Micro including Granny s Garden an educational game for primary schools and Elite the seminal space trading game She considers the shift in focus from hardware to peripherals describing the Teletext Adapter as an early model for software distribution and the Domesday Project which combined texts video and still photographs as a hypermedia like experience Gazzard s account shows the BBC Micro not only as a vehicle for various literacies but also as a user oriented machine that pushed the boundaries of what could be achieved in order to produce something completely new **How Computers Entered the Classroom,**

1960-2000 Carmen Flury,Michael Geiss,2023-06-19 In the history of education the question of how computers were introduced into European classrooms has so far been largely neglected This edited volume strives to address this gap The contributions shed light on the computerization of education from a historical perspective by attending closely to the different actors involved such as politicians computer manufacturers teachers and students political rationales and ideologies as well as financial political or organizational structures and relations The case studies highlight differences in political and economic power as well as in ideological reasoning and the priorities set by different stakeholders in the process of introducing computers into education However the contributions also demonstrate that simple cold war narratives fail to capture the complex dynamics and entanglements in the history of computers as an educational technology and a subject taught in schools The edited volume thus provides a comprehensive historical understanding of the role of education in an emerging digital society
