**Leukocyte Adhesion** Peter E. Lipsky, Robert Rothlein, Takashi K. Kishimoto, Ronald B. Faanes, C. Wayne Smith, 2012-12-06

Leukocyte adhesion molecules have been the subject of intense basic and preclinical research. Results from clinical trials obtained so far with antibodies directed towards these surface proteins offer promise for the prevention of graft rejection and effective treatment of acute and chronic inflammatory disease. This volume presents a comprehensive review of contemporary research on the structure, function, and regulation of leukocyte adhesion molecules and their ligands from the molecular to the clinical level. The blend of basic science and clinical applications presented in *Structure, Function, and Regulation of Molecules Involved in Leukocyte Adhesion* provides clear evidence of the biological importance of cell-cell interactions and the many potential clinical dividends afforded by understanding the molecular basis of cell adhesion. It will appeal to a broad range of readers in immunology and cell biology.

**Cell Kinetics of the Inflammatory Reaction** Olav H. Iversen, 2012-12-06. The European Study Group for Cell Proliferation held its XVth Meeting at Sundvolden, Norway, in September 1987. The program included a symposium on the cell kinetics of the inflammatory reaction with invited speakers. This volume of *Current Topics in Pathology* contains the manuscripts submitted by the speakers. Inflammation is a very broad area, and the cell kinetics of the inflammatory reaction comprises a large number of topics. A full coverage would fill more than one book. This volume therefore contains only a few of the important aspects of the cell kinetics of the inflammatory reaction. It is hoped that it will serve as inspiration for further research in this important area. Inflammatory diseases are even more important than cancer, and there is a great need for more detailed information about inflammation. OLAV HILMAR IVERSEN. Contents: Chapter I: The Cell Kinetics of the Inflammatory Reaction: Introduction and Overview.

**Molecular Biology of the Cell** Bruce Alberts, Dennis Bray, John Howard, Wilson (biochemist), Hunt, Julian Lewis, Martin Raff, Keith Roberts, James D. Watson, 1989-01-01. New edition of a text in which six researchers from leading institutions discuss what is known and what is yet to be understood in the field of cell biology. The material on molecular genetics has been revised and expanded so that it can be used as a stand-alone text. A new chapter covers pathogens, infection, and innate immunity. Topics include introduction to the cell, basic genetic mechanisms, methods, internal organization of the cell, and cells in their social context. The book contains color illustrations and charts, and the included CD-ROM contains dozens of video clips, animations, molecular structures, and high-resolution micrographs.
