## **The Making Of Scientific Management:**

**The Making of Scientific Management: Thirteen pioneers** Lyndall Fownes Urwick, Edward Franz Leopold Brech, 1949  
**The Administrative State** Dwight Waldo, 2017-09-04 This classic text originally published in 1948 is a study of the public administration movement from the viewpoint of political theory and the history of ideas. It seeks to review and analyze the theoretical element in administrative writings and to present the development of the public administration movement as a chapter in the history of American political thought. The objectives of *The Administrative State* are to assist students of administration to view their subject in historical perspective and to appraise the theoretical content of their literature. It is also hoped that this book may assist students of American culture by illuminating an important development of the first half of the twentieth century. It thus should serve political scientists whose interests lie in the field of public administration or in the study of bureaucracy as a political issue, the public administrator interested in the philosophic background of his service and the historian who seeks an understanding of major governmental developments. This study now with a new introduction by public policy and administration scholar Hugh Miller is based upon the various books, articles, pamphlets, reports and records that make up the literature of public administration and documents the political response to the modern world that Graham Wallas named the Great Society. It will be of lasting interest to students of political science, government and American history.

*The Making of Scientific Management* Lyndall Urwick, 1964  
**Behemoth: A History of the Factory and the Making of the Modern World** Joshua B. Freeman, 2018-02-27 Freeman's rich and ambitious *Behemoth* depicts a world in retreat that still looms large in the national imagination. More than an economic history or a chronicle of architectural feats and labor movements, Jennifer Szalai, *New York Times*. In an accessible and timely work of scholarship, celebrated historian Joshua B. Freeman tells the story of the factory and examines how it has reflected both our dreams and our nightmares of industrialization and social change. He whisks readers from the early textile mills that powered the Industrial Revolution to the factory towns of New England to today's behemoths making sneakers, toys and cellphones in China and Vietnam. *Behemoth* offers a piercing perspective on how factories have shaped our societies and the challenges we face now.

**Photography, Vision, and the Production of Modern Bodies** Suren Lalvani, 1996-01-01 Lalvani argues that modernity represents the powerful privileging of vision and the introduction of a paradigm of seeing that is historically distinctive. Taking the introduction of photography in the nineteenth century as a crucial development in the expansion of modern vision, he draws on the writings of Alan Sekula, John Tagg, Jonathan Crary, Norman Bryson and Martin Jay to examine in a comprehensive manner how photography functioned to organize a set of relations between knowledge, power and the body. However, in taking a broad cultural studies approach, Lalvani situates the practices of photography within the larger visual order of the nineteenth century. He demonstrates how the new lines of visibility formed not only by photography but by

new urban spaces and new modes of transportation resulted in a particular organizing of the social order of subjectivity and social relations     *"The" Making of Scientific Management* Lyndall F. Urwick, E. F. L. Brech, 1957     **The Principles of Scientific Management** Frederick Winslow Taylor, 1911 The classic study on improving efficiency and labor productivity through the close study and observation of work     *Living with the Land* Liesbeth van de Grift, Dietmar Müller, Corinna R. Unger, 2022-11-07 For a long time agriculture and rural life were dismissed by many contemporaries as irrelevant or old fashioned Contrasted with cities as centers of intellectual debate and political decision making the countryside seemed to be becoming increasingly irrelevant Today politicians in many European countries are starting to understand that the neglect of the countryside has created grave problems Similarly historians are remembering that European history in the twentieth century was strongly influenced by problems connected to the production of food access to natural resources land rights and the political representation and activism of rural populations Hence the handbook offers an overview of historical knowledge on a variety of topics related to the land It does so through a distinctly activity centric and genuinely European perspective Rather than comparing different national approaches to living with the land the different chapters focus on particular activities from measuring to settling the land from producing and selling food to improving agronomic knowledge from organizing rural life to challenging political structures in the countryside Furthermore the handbook overcomes the traditional division between East and West North and South by embracing a transregional approach that allows readers to gain an understanding of similarities and differences across national and ideological borders in twentieth century Europe
