The Making Of Statisticians:

The Making of Statisticians J. Gani, 2012-12-06 Like many other scientists I have long been interested in history I enjoy reading about the minutiae of its daily unfolding the coinage food clothes games literature and habits which characterize a people I am carried away by the broad sweep of its major events the wars famines migrations reforms political swings and scientific advances which shape a society I know that historians value autobiographical accounts as part of the basic material from which the stuff of history is distilled this should apply no less to statistical than to political or social history Modern statistics is a relatively young science it was while pondering this fact sometime in 1980 that I realized that many of the pioneers of our field could still be called upon to tell their stories If however biographical material about these eminent statisticians was not gathered then one might lose the chance to gain insight into the origins of many an important statistical development The remarkable experience of these colleagues could not be readily duplicated Fired by these thoughts I took it upon myself to plan the framework of this book In it eminent statisticians probabilists are included under this title would be invited to sketch their lives explain how they had become interested in probability and statistics give an account of their major contributions and possibly hazard some predictions about the future of the subject

The Making of Statisticians J. Gani, 1982-08-09 **Bulletin of the United States Bureau of Labor Statistics**, 1975 **The Mutual Construction of Statistics and Society** Ann Rudinow Saetnan, Heidi Mork Lomell, Svein Hammer, 2010-09-13 Statistics are often seen as simple straightforward and objective descriptions of society However what we choose to count what we choose not to count who does the counting and the categories and values we choose to apply when counting matter This volume addresses the ways in which statistics and numbers are gathered and applied in social science research The contributors argue that we must become more aware of the power and the limitations of statistics Learning statistics needs to be about more than simply mastering the techniques of using the tool it needs to also be about learning the dangers of that tool and learning to control it within social and ethical bounds These dangers lie in the routines through which statistics are applied the discourses from which they emerge and into which they are deployed the power relations created by those discourses and the assumptions meanings and categories statistics carry with them in those discourses This volume will be necessary reading for students and scholars using quantitative data within the social sciences
