larger spectrum of synthesized nanoparticle morphologies and the substantially faster biosynthesis rate in cell free filtrate due to the higher amount of proteins secreted in fungi make this a particularly enticing route Understanding the diversity of fungi in assorted ecosystems as well as their interactions with other microorganisms animals and plants is essential to underpin real and innovative technological developments and the applications of metal nanoparticles in many disciplines including agriculture catalysis and biomedical biosensors Importantly biogenic fungal nanoparticles show significant synergistic characteristics when combined with antibiotics and fungicides to offer substantially greater resistance to microbial growth and applications in nanomedicine ranging from topical ointments and bandages for wound healing to coated stents
