Soft X-ray Emission From Clusters Of Galaxies And Related Phenomena:

Soft X-Ray Emission from Clusters of Galaxies and Related Phenomena R. Lieu, Jonathan Mittaz, 2004-09-13 Since the discovery of the cluster soft excess CSE over eight years ago its properties and origin have been the subject of debate. With the recent launch of new missions such as XMM Newton and FUSE we are beginning to answer some of the complex issues regarding the phenomenon. This conference proceedings is an attempt to bring together the latest research results and covers both observational and theoretical work on the CSE and related topics. One of the main topics is the possible relationship between the CSE and the warm hot intergalactic medium WHIM which is believed to harbor 50% of the baryons in the near Universe. New data from both XMM Newton and FUSE have indicated a possible causal link between the WHIM and CSE. Evidence is based on the apparent detection of O VII emission lines in the soft excess spectrum of the outskirts of several clusters as well as reports of absorption lines at local and higher redshifts seen in the spectra of distant sources as signature of the WHIM. However while there has been considerable optimism in attributing a substantial fraction of the cluster soft excess flux to WHIM emission other work shows that for example the amount of WHIM material predicted by theoretical simulations falls way short of that necessary to account for the CSE. Other work indicates that at the cores of some cluster this excess emission is so strong it is impossible to invoke the thermal model without at the same time enlisting radically new physics. Thus alternative interpretations involving non thermal processes are also reported and being pursued in earnest. Whatever the origin of CSE may turn out to be results in this book show that it has become beyond reasonable doubt that the phenomenon itself is observationally established. This book reports the scientific progress made by bringing together scientists from a wide range of disciplines. It clearly demonstrates the importance of such meetings and participants if we are to solve this puzzle. This volume is aimed at scientists and graduate students in astronomy who want to learn about the latest results on cluster soft excess observations and theoretical implications.

Outskirts of Galaxy Clusters (IAU C195) International Astronomical Union. Colloquium, 2004-12-16 This book contains the proceedings of the International Astronomical Union Colloquium no 195 held in Torino Italy in 2004. The meeting investigated the formation of galaxies within a full cosmological context focusing on the outer regions of galaxy clusters. The observed correlation of optical and radio properties of galaxies with their environment indicates that the formation and evolution of galaxies is intimately linked to the formation of large scale structure. With chapters written by leading authorities in the field this timely volume investigates the role of the environment in determining the properties of galaxies. It describes the distribution of matter and galaxies on the largest scales in the Universe the processes of cluster and galaxy formation their role and interplay. This is a valuable collection of review articles for professional astronomers.

Clusters of Galaxies: Beyond the Thermal View Jelle Kaastra, 2008-05-01 The existence of soft excess emission originating from clusters of galaxies dened as emission detected below 1 keV in excess over the usual thermal emission from hot intracluster gas hereafter the ICM has been claimed since

1996 Soft excesses are particularly important to detect because they may at least partly be due to thermal emission from the Warm Hot Intergalactic Medium where as much as half of the baryons of the Universe could be. They are therefore of fundamental cosmological importance. Soft excess emission has been observed and has also given rise to controversy in a number of clusters mainly raising the following questions: 1 Do clusters really show a soft excess? 2 If so from what spatial regions of the cluster does the soft excess originate? 3 Is this excess emission thermal originating from warm hot intergalactic gas at temperatures of 10^6 K or non thermal in which case several emission mechanisms have been proposed. Interestingly some of the non thermal mechanisms suggested to account for soft excess emission can also explain the hard X ray emission detected in some clusters for example by RXTE and BeppoSAX also see Petrosian et al 2008 Chap 10 this issue Rephaeli et al 2008 Chap 5 this issue.

Cores to Clusters M.S. Nanda Kumar, M. Tafalla, P. Caselli, 2008-04-07 It was with pleasure that CAUP became for three days the core to the cloud of star formation experts all over the world. Close to the celebration of its 15th anniversary therefore still in the early stages of institutional evolution we are proud of our multiple activities in Astronomy a productive research centre classified as Institution of excellence within the Portuguese research units but also an Institution of Public Utility as recognised by the Government. Fifteen years ago we choose to play a role not only in research as expected from any research centre but also in the training of the future astronomers and the promotion of science and scientific culture. This choice is clearly stated in our by laws and also in the multiple activities we have carried out since. Along the years we have organized on a regular basis international Workshops similar to Cores to Clusters. Sometimes we have chosen to organize international conferences of a larger size. On other occasions the choice has been for smaller and more informal discussion meetings. Or even doctoral schools with very different objectives. In common all those meetings have always had besides the formal registered participants a group of informal participants our undergraduate students of Astronomy so eager to be in touch with the real world.

Identification Of Dark Matter, The - Proceedings Of The Fifth International Workshop Neil J C Spooner, Vitaly Kudryavtsev, 2005-05-12 The prestigious Identification of Dark Matter workshop series was initiated to assess the status of work that attempts to identify the constitution of dark matter. In particular it aims to review the success of current methods that are used in the search for dark matter as well as the new techniques that are likely to improve prospects for detecting possible dark matter candidates in the future. In the 5th International Workshop special emphasis was placed on the recent results obtained in experiments searching for baryonic and non baryonic dark matter. This volume comprises the high quality review articles and papers contributed by leaders and promising young physicists who attended the conference. It provides the most recent updates on dark matter searches from both experimental and theoretical points of view. The proceedings have been selected for coverage in Index to Scientific Technical Proceedings, ISTP, ISI Proceedings, Index to Scientific Technical Proceedings, ISTP, CDROM version, ISI Proceedings, CC Proceedings, Engineering Physical Sciences.

Light Pollution Handbook Kohei Narisada, Duco Schreuder, 2013-06-05 This book deals with light pollution and about the ways to reduce it Light pollution is one of the negative side effects of artificial outdoor lighting The term light pollution is an unhappy one but as no better alternative seems to exist it will be used throughout this book The function of all outdoor lighting is to enhance the visibility or the aesthetics in the nighttime environment The light should come where it is needed If not it is spilled causing economic and environmental losses as well as disturbance and discomfort The overall effects are termed light pollution a major form of light pollution is the glow extending over the night sky Sky glow is discussed in many astronomical textbooks and in many popular brochures The present book is primarily aimed at those responsible for outdoor lighting installations Thus an engineering approach has been chosen The level of the book is that of college or University level The book is organized in two parts The first seven chapters cover the areas of general interest and conclude with recommendations The second part deals with the scientific and engineering elaboration of the first part A number of examples are included that refer to specific outdoor lighting installations and projects that are directly related to the reduction of light pollution Finally some information is given about the authors

Discovering Postmodern Cosmology Jerome Drexler, 2008 Learn how a world class inventor scientist is currently tackling the greatest scientific mysteries of the universe and succeeding With his new book Drexler provides a viable baseline to jump start debate on a standard model for postmodern cosmology It is the first book to not only address these seven unsolved cosmic mysteries shown in this book's subtitle but also offer plausible explanations for each of them The correlation of these seven cosmic phenomena by Drexler offers a revolutionary advance in cosmological research and potentially broad acceptance and use of the related concepts This book was written for open minded cosmologists astronomers astrophysicists physicists engineers students enthusiasts and those at NASA NSF DOE and ESO who want to understand postmodern cosmology The author's five

years of cosmology research and his successes convinced him that his postmodern cosmology model is correctly based upon the relationships and linkages of these seven cosmic phenomena

Questions of Modern Cosmology Mauro D'Onofrio, Carlo Burigana, 2009-07-09 Are we living in the golden age of cosmology Are we close to understanding the nature of the unknown ingredients of the currently most accepted cosmological model and the physics of the early Universe Or are we instead approaching a paradigm shift What is dark matter and does it exist How is it distributed around galaxies and clusters Is the scientific community open to alternative ideas that may prompt a new scientific revolution as the Copernican revolution did in Galileo's time Do other types of supernovae exist that can be of interest for cosmology Why have quasars never been effectively used as standard candles Can you tell us about the scientific adventure of COBE How does the extraction of the Cosmic Microwave Background anisotropy depend on the subtraction of the various astrophysical foregrounds These among many others are the astrophysical philosophical and sociological questions surrounding modern cosmology and the scientific community that Mauro D'Onofrio and Carlo Burigana pose to some of the most prominent cosmologists of our time Triggered by these questions and in the spirit of Galileo's book Dialogue Concerning the Two Chief World Systems the roughly 40 interview partners reply in the form of essays with a critical frankness not normally found in reviews monographs or textbooks
