Solar And Space Physics:

Solar and Space Physics National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on a Decadal Strategy for Solar and Space Physics (Heliophysics), 2014-09-25 In 2010 NASA and the National Science Foundation asked the National Research Council to assemble a committee of experts to develop an integrated national strategy that would guide agency investments in solar and space physics for the years 2013-2022. That strategy, the result of nearly 2 years of effort by the survey committee which worked with more than 100 scientists and engineers on eight supporting study panels, is presented in the 2013 publication *Solar and Space Physics: A Science for a Technological Society*. This booklet, designed to be accessible to a broader audience of policymakers and the interested public, summarizes the content of that report. *Solar and Space Physics and Its Role in Space Exploration* National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Assessment of the Role of Solar and Space Physics in NASA's Space Exploration Initiative, 2004-10-11 In February 2004 the President announced a new goal for NASA to use humans and robots together to explore the Moon, Mars, and beyond. In response to this initiative, NASA has adopted new exploration goals that depend in part on solar physics research. These actions raised questions about how the research agenda recommended by the NRC in its 2002 report *The Sun to the Earth and Beyond* which did not reflect the new exploration goals would be affected. As a result, NASA requested the NRC to review the role solar and space physics should play in support of the new goals. This report presents the results of that review. It considers solar and space physics both as aspects of scientific exploration and in support of enabling future exploration of the solar system. The report provides a series of recommendations about NASA's Sun-Earth Connections program to enable it to meet both of those goals.

Solar and Space Physics National Research Council, Division on Engineering and Physical Sciences, Space Science Board, Task Group on Solar and Space Physics, 1988-02-01 From the interior of the Sun to the upper atmosphere and near-space environment of Earth and outward to a region far beyond Pluto where the Sun's influence wanes, advances during the past decade in space physics and solar physics—the disciplines NASA refers to as heliophysics—have yielded spectacular insights into the phenomena that affect our home in space. *Solar and Space Physics* from the National Research Council's NRC's Committee for a Decadal Strategy in Solar and Space Physics is the second NRC decadal survey in heliophysics. Building on the research accomplishments realized during the past decade, the report presents a program of basic and applied research for the period 2013-2022 that will improve scientific understanding of the mechanisms that drive the Sun's activity and the fundamental physical processes underlying near-Earth plasma dynamics, determine the physical interactions of Earth's atmospheric layers in the context of the connected Sun-Earth system, and enhance greatly the capability to provide realistic and specific forecasts of Earth's space environment that will better serve the needs of society. Although the recommended program is directed primarily at NASA and the National Science Foundation for action, the report also

recommends actions by other federal agencies especially the parts of the National Oceanic and Atmospheric Administration charged with the day to day operational forecast of space weather In addition to the recommendations included in this summary related recommendations are presented in this report Solar and Space Physics Committee on a Decadal Strategy for Solar and Space Physics (Heliophysics), Space Studies Board, Aeronautics and Space Engineering Board, Division on Engineering and Physical Sciences, National Research Council, 2013-08-26 From the interior of the Sun to the upper atmosphere and near space environment of Earth and outward to a region far beyond Pluto where the Sun's influence wanes advances during the past decade in space physics and solar physics the disciplines NASA refers to as heliophysics have yielded spectacular insights into the phenomena that affect our home in space Solar and Space Physics from the National Research Council's NRC's Committee for a Decadal Strategy in Solar and Space Physics is the second NRC decadal survey in heliophysics Building on the research accomplishments realized during the past decade the report presents a program of basic and applied research for the period 2013-2022 that will improve scientific understanding of the mechanisms that drive the Sun's activity and the fundamental physical processes underlying near Earth plasma dynamics determine the physical interactions of Earth's atmospheric layers in the context of the connected Sun-Earth system and enhance greatly the capability to provide realistic and specific forecasts of Earth's space environment that will better serve the needs of society Although the recommended program is directed primarily at NASA and the National Science Foundation for action the report also recommends actions by other federal agencies especially the parts of the National Oceanic and Atmospheric Administration charged with the day to day operational forecast of space weather In addition to the recommendations included in this summary related recommendations are presented in this report **The Sun to the Earth and Beyond** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Solar and Space Physics, Solar and Space Physics Survey Committee, 2003-12-17 This volume The Sun to the Earth and Beyond Panel Reports is a compilation of the reports from five National Research Council NRC panels convened as part of a survey in solar and space physics for the period 2003-2013 The NRC's Space Studies Board and its Committee on Solar and Space Physics organized the study Overall direction for the survey was provided by the Solar and Space Physics Survey Committee whose report The Sun to the Earth and Beyond A Decadal Research Strategy in Solar and Space Physics was delivered to the study sponsors in prepublication format in August 2002 The final version of that report was published in June 2003 The panel reports provide both a detailed rationale for the survey committee's recommendations and an expansive view of the numerous opportunities that exist for a robust program of exploration in solar and space physics **Solar and Space Physics** National Research Council (U.S.).
