Molecular Interactions in Bioseparations That T. Ngo, 2013-11-11 Rapid advances in molecular biology have accelerated the production of a great number of protein based therapeutic agents The major cost in producing these proteins appears to be associated with their purification from the complex mixture of the crude extract A major challenge to the protein biochemist and the biochemical engineer is the development of rapid efficient and cost effective purification systems This volume presents state of the art reviews of current methods used in the purification of biological macromolecules that are based on molecular interactions Thus the major emphasis is placed on affinity related techniques Part I provides a general introduction to affinity chromatography and includes a chapter describing an interesting new technique called slalom chromatography for DNA fractionations Affinity chromatography using molecules of biological origin as the affinity ligand is covered in Part II Part III describes the use of a special class of biomolecules antibodies as affinity ligands Affinity chromatography with biomimetic ligands is discussed in Part IV Newer concepts and their applications in bioseparation are presented in Part V Part VI covers affinity related techniques such as affinity based extracorporeal shunts affinity electrophoresis affinity precipitation and

affinity extraction I would like to express my sincere thanks to all the authors who are recognized experts in their respective fields for their cooperation and contributions I thank the editorial staff of Plenum Press for their professionalism and Mary Phillips Born Senior Editor for her encouragement The support of my family Ping and Peilin made it possible to complete editing this book That T

Platelet Membrane Glycoproteins James N. George, 2013-03-13 It was just about ten years ago that platelet membrane glycoproteins were first characterized and their abnormalities in congenital bleeding disorders first recognized During this decade there has been a remarkable growth in our understanding of the structure and membrane organization of the platelet surface glycoproteins their interactions with external ligands during the process of hemostasis and their defects causing hemorrhagic disease These studies have advanced the knowledge of platelet involvement in hemostasis from a cellular to a molecular level and they have provided a model for contact interactions among other cell types This seemed a proper time to ask those who contributed major observations and insights during these past years to review their progress and to assess the state of our present knowledge We have planned this volume to begin with the biochemistry of platelet membrane glycoproteins themselves and proceed through their involvement in platelet function to the final considerations of the platelet's role in maintaining the integrity of the vascular system Our aim was an integrated presentation on the blood platelet from the perspective of its highly specialized and reactive cell surface James N George Alan T Nurden David R Phillips vii Contents I INTRODUCTION 1 Plasma Membrane Receptors and Platelet Response Ernst F Wscher 1 Introduction 3 2 Platelet Receptor Functions 4 2 1 Receptors Involved in Platelet Adhesion and in Cell Cell Contact 5 2 2 Receptors Involved in Platelet Activation 6 3 Conclusion 8 References 8 II
